PHOENIX Collaboration Platform POC

Coherent Community Intelligence and Coherence Concierge - Integrated Technical, Product, Governance, Revenue and Delivery Proposal

World Systems Solutions / PHOENIX

24 August 2026

Prepared for Shaligram Infotech LLP | Version 3.0 - Integrated Co-Design Draft

One governed collaboration kernel: purpose, community intelligence, action, evidence, memory and revenue-enabled access.

Document Control and Release Boundary

Control field	V3 treatment
Prepared for	Shaligram Infotech LLP
Prepared by	World Systems Solutions / PHOENIX
Version	3.0 - Integrated Co-Design and Scope Alignment Draft
Purpose	Consolidate the complete technical and commercial-operating detail of Proposal v1.0 with the Coherent Community Intelligence, Coherence Concierge, purpose, regeneration, inclusion and repository architecture of Proposal v2.0.
Product posture	One shared collaboration kernel with three configurable use-case packs: Education / LMS Constellation, Seva Hub and Women's Empowerment.
Delivery posture	Acceptance-gated milestones, source-controlled build, explicit exclusions, human-governed AI, WSS-controlled accounts and data.
Commercial treatment	No project financial figures are included in this document. Pricing values and commercial consideration, if required, belong in a separately approved commercial annex.
Status	Commercial and technical co-design draft for controlled review.

Release boundary. This proposal does not establish a partnership, endorsement, institutional commitment, research approval, accreditation, funding guarantee, production authorization or public claim. PHOENIX, the Coherence Concierge, specialist agents, dashboards, integrations and use-case packs remain proposed prototype capabilities until accepted in writing and demonstrated against the applicable acceptance criteria.

Transmittal and Decision Request

Dear Shaligram Team,

World Systems Solutions appreciates Shaligram Infotech's framing of PHOENIX as a secure, phone-first collaboration and impact layer that operates alongside existing learning systems rather than replacing them. Proposal v1.0 converted that premise into a disciplined product scope with identity, consent, evolving profiles, Collaboration Circles, Coherence Cell project rooms, evidence, payments, entitlements, revenue architecture, metrics, technical services and acceptance controls. Proposal v2.0 extended the concept into Coherent Community Intelligence, the Coherence Concierge, purpose-to-regeneration guidance, governed agents, social-justice and Rope Team pathways, a communications repository and a richer community operating model.

Version 3.0 integrates both proposals into one non-repetitive specification. It preserves every critical V1 section and technical requirement, maps each requirement to the expanded V2 scope, and organizes the result in the order a product and engineering team needs to read it: product thesis, users and methods, platform capabilities, intelligence and memory, milestone releases, revenue and access, data and technology, governance, acceptance and next actions.

Decision requested from Shaligram

Please return a revised milestone-based Statement of Work that:

1. confirms the complete V3 scope and explicit exclusions;
2. maps each deliverable to testable acceptance criteria;
3. identifies the proposed architecture, technologies, third-party services and integration dependencies;
4. explicitly contracts or excludes the Project Communications and Recordings Repository and each Zoom / Microsoft Teams import method;
5. preserves WSS operational control of source code, repositories, schemas, prompts, model settings, cloud accounts, payment accounts and data;
6. defines data retention, storage quotas, backup, recovery, accessibility, security, support and handover provisions;
7. confirms that every consequential AI output remains reviewable, correctable and attributable to its sources; and
8. supplies a traceable response to the clarification register in Section 28.

Proposal at a Glance

Dimension	Integrated V3 decision
Core problem	Information is abundant, but trusted coordination, contextual interpretation, follow-through, shared memory and regenerative action remain scarce.
Core product	A phone-first collaboration kernel that turns individual and community insight into governed Coherent Community Intelligence.
User-facing AI	A Coherence Concierge that evolves with the user, explains its suggestions, cites approved sources and acts only within declared authority.
Operating loops	User loop: Orient - Learn - Connect - Co-create - Act - Evidence - Evolve. Community loop: Sense - Interpret - Deliberate - Align - Act - Evidence - Learn / Repair - Evolve.
Purpose logic	Ikigai-inspired purpose reflection combined with WSS axioms, community context, social foundations, ecological ceilings and regenerative design.
Initial use cases	Education / LMS Constellation, Seva Hub and Women's Empowerment, configured on one common kernel.
Revenue foundation	Subscriptions, one-time programmes, institutional access, sponsored seats, donations, services, grants and mission-aligned partnerships.
Trust posture	Invitation-aware, role-authorized, consent-controlled, source-traceable, non-ranking, correctable, auditable and human-governed.
Technical posture	Modular PWA, managed relational data, event-driven interfaces, provider-independent AI and payments, secure object storage and WSS-controlled operations.

Contents and Navigation

Document part	Scope
Front Matter	Document Control; Transmittal and Decision Request; Reader Guide
Part I	Sections 1-5: Product Thesis, CCI, Methods, Model Community and North Star
Part II	Sections 6-8: Personas, Onboarding, Inclusion, Common Kernel and Use Cases
Part III	Sections 9-12: Concierge, Agents, Repository, Matching, Learning and Evidence
Part IV	Sections 13-16: Success Definition and Three Milestone Releases
Part V	Sections 17-21: Payments, Access, Revenue, ROI, Metrics and Funder Readiness
Part VI	Sections 22-25: Technical, Data, Integration and Guardrail Architecture
Part VII	Sections 26-29: Delivery, Acceptance, Risk, Clarifications and Working Sequence
Appendices	A-H: Backlog, Traceability, Tests, Agent Cards, Data, Metrics, Sources and Glossary

Reader Guide and Integrated Scope Map

How to read this proposal

- **Parts I and II** explain the product concept, users, methods and community model.
- **Part III** specifies the Coherence Concierge, agents, communications memory, matching, learning and evidence.
- **Part IV** defines the three acceptance-gated milestone releases.
- **Part V** retains the V1 payment, entitlement, pricing, revenue, ROI and funder-readiness architecture without inserting financial values.
- **Part VI** scales the V1 technical and data specifications into the V2 agent, repository, warm-data and regenerative scope.
- **Part VII** defines governance, acceptance, ownership, support, risk and the decisions required from Shaligram.
- **Appendix B** proves section-level coverage from both earlier proposals and identifies where each item is carried forward.

Scope integration rule

V3 uses one requirement only once. When V1 and V2 describe the same capability, V3 retains the more complete behavior, adds the newer conceptual meaning, and places it in the most operational section. No requirement is treated as implemented merely because it appears in this proposal.

Part I - Product Thesis, Community Intelligence and Methods

1. Executive Proposal and Product-Impact Proposition

WSS proposes a bounded PHOENIX proof of concept that demonstrates how diverse users can move from safe onboarding and purpose clarification to trusted collaboration, practical action, evidence, learning and profile evolution. The platform is not another content library, generic social network or autonomous AI system. It is a governed coordination environment in which people, institutions and communities can understand their context, find complementary capacities, form accountable working groups, carry out visible actions and retain an evidence-backed memory of what was learned.

1.1 Product promise

> **PHOENIX helps a person or community move from fragmented intention to coherent, reviewable and regenerative action.**

The product promise is expressed through two linked loops:

1. **Personal and organizational journey:** Orient - Learn - Connect - Co-create - Act - Evidence - Evolve.
2. **Coherent Community Intelligence journey:** Sense - Interpret - Deliberate - Align - Act - Evidence - Learn / Repair - Evolve.

The first loop gives each user a clear pathway. The second ensures that personal activity contributes to community learning without dissolving individual agency into a collective score.

1.2 Problems the platform is designed to solve better

Problem	Current gap	PHOENIX response	Evidence of value
Fragmented identity and purpose	Profiles are static, generic and disconnected from action.	Versioned profile, Purpose Compass, North Star, milestone and evidence-linked evolution.	Confirmed profile claims, milestone progression, accepted profile changes.
One-way learning	Conventional LMS environments distribute content but weakly connect learning to purpose, peers, community needs and projects.	Adaptive, reviewed pathways; Circles; mentors; Action Rooms; portfolio evidence; LMS deep links.	Learning-to-action conversion, applied evidence, pathway completion.
Coordination overload	Meetings create notes but not shared decisions, commitments, ownership or follow-through.	Circles, reviewed Learning Harvests, Change Objects, commitments, tasks and repository links.	Commitment completion, decision traceability, visible-win progress.
Weak relationship discovery	People and organizations do not see complementary needs, assets, offers and timing.	Structured cards, explainable Match Briefs, steward review and mutual consent.	Match activation, match-to-action conversion, collaboration quality.
Unaccountable AI	AI suggestions may be opaque, uncorrectable or over-authoritative.	Coherence Concierge, agent registry, source lineage, authority classes and human review.	Review compliance, correction rates, AI incident rate, source coverage.
Impact claims without evidence	Outputs, outcomes and regenerative claims become conflated.	Evidence Locker, metric passports, evidence grades, governance gates and Learning Harvests.	Evidence coverage, verified outcomes, decision readiness.
Revenue and access tension	Access models can exclude users or reward influence rather than service.	Transparent plans, sponsored seats, solidarity access, entitlements and mission guardrails.	Access mix, paid activation, sponsored-seat utilization, retention.

1.3 Initial use cases

Education / LMS Constellation

A purpose-led collaboration layer around institutional learning that can support learners, faculty, alumni, employers, community partners, local authorities and programme administrators. It connects learning demand to courses, mentors, practical projects, community priorities and evidence of applied capability.

Seva Hub

A service-oriented environment in which intention, contemplative practice, community relationship and verified acts of care can be connected without engagement-maximizing mechanics. The POC supports circles, service pledges, local opportunities, trusted guidance sources and evidence of service; it does not claim to deliver the complete long-horizon Seva programme.

Women's Empowerment

A leadership and opportunity environment supporting women-led circles, mentorship, learning pathways, project action, storytelling, resource discovery, safe referral routing and evidence of leadership development. High-risk functions such as automated workplace adjudication, psychometric ranking, formal accreditation and automated funding decisions remain outside the POC.

1.4 Strategic differentiation

The differentiator is not the number of screens. It is the joined architecture of:

- evolving evidence-linked profiles;
- private and shareable warm data;
- role authority and consent;
- purpose-to-regeneration navigation;
- facilitated Circles and Rope Teams;
- needs, assets, offers and opportunity mapping;
- explainable human-approved matching;
- bounded Action Rooms and Change Objects;
- communications and decision memory;
- human-reviewed AI;
- portable evidence;
- contextual metrics; and
- revenue-enabled access governed by dignity and mission.

2. Coherent Community Intelligence

Coherent Community Intelligence, or CCI, is the actionable form of collective intelligence proposed for PHOENIX. It is the governed capacity of a community to sense conditions, interpret knowledge in context, deliberate across difference, coordinate authority and resources, act, learn from consequences, preserve useful memory and repair harm.

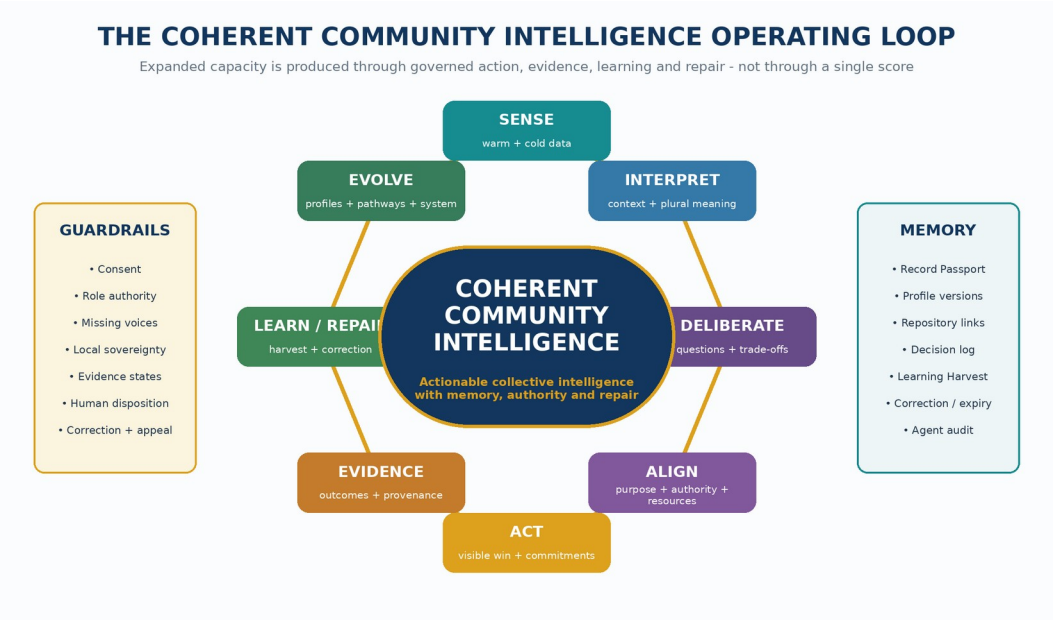

Figure 2. The CCI operating loop connects sensing and interpretation to action, evidence, learning, repair and evolution.

2.1 What CCI is not

CCI is not:

- a crowd-voting mechanism;
- a universal community score;
- a social-media engagement system;
- an AI answer engine;
- a repository without action pathways;

- a digital twin that overrides lived reality;
- an aggregation of private data without continuing consent; or
- an excuse to replace accountable leadership with algorithmic coordination.

2.2 CCI stages and platform outputs

CCI stage	Human activity	Platform support	Governing record
Sense	Surface conditions, experiences, needs, assets and signals.	Intake, surveys, warm-data prompts, cards, transcripts, maps.	Source record with provenance and visibility.
Interpret	Place signals in social, ecological, economic and institutional context.	Knowledge retrieval, systems maps, contextual prompts, source comparison.	Interpretation with sources and uncertainty.
Deliberate	Hear difference, missing voices, trade-offs and concerns.	Circle agenda, agreements, facilitation prompts, reviewed harvest.	Deliberation record and consent state.
Align	Define purpose, roles, authority, dependencies and success evidence.	Match Brief, charter, role matrix, milestone plan, metric passport.	Approved Change Object or Action Room charter.
Act	Carry out commitments and visible-win activities.	Tasks, milestones, resources, risks, notifications and project state.	Activity, decision and commitment records.
Evidence	Connect claims to artifacts, observations and review.	Evidence Locker, uploads, reviewer workflow, evidence grade.	Evidence artifact and review decision.
Learn / Repair	Examine results, tensions, unintended effects and necessary correction.	Learning Harvest, incident and appeal routes, retrospective prompts.	Harvest, remedy and change history.
Evolve	Update profiles, pathways, practices, templates and network knowledge.	Version comparison, approved profile candidate, reusable pattern.	New version with lineage to prior state.

2.3 CCI design principles

- **Human agency before automation.** The system supports accountable choice rather than substituting for it.
- **Context before comparison.** Signals are interpreted in place, relationship and purpose before any aggregation.
- **Coherence before scale.** Replication follows demonstrated practice, not merely user growth.
- **Evidence before claim.** Outcomes remain provisional until their evidence state is visible.
- **Repair before reputation.** Concerns trigger human review and remedy, not hidden scoring.
- **Local sovereignty with shared learning.** Communities retain authority while contributing approved patterns to wider networks.

3. Method and Practice Foundation

PHOENIX does not invent a single universal facilitation method. It provides a governed way to combine recognized approaches while keeping their assumptions, authorities and limits visible.

3.1 Method register

Method or model	Intended use in PHOENIX	Platform-readable outputs	Boundary
WSS Conscious Collaboration	Trust, listening, agreements, repair, learning and action.	Circle agreement, reflection, commitment, concern, repair and harvest.	Requires trained facilitation for sensitive work.
Coherence Circles	Persistent small-group dialogue and relational depth.	Membership, session, agenda, commitment and reviewed harvest.	Not a substitute for clinical, legal or formal governance process.
Rope Teams	Belonging, mutual support, pacing and retention for under-represented participants.	Team charter, support request, barrier, mentor and pathway state.	Metaphor and implementation require partner validation.
Coherence Cells	Bounded teams that turn priorities into visible action.	Charter, Change Object, tasks, risks, resources, evidence and learning.	Lightweight project space, not a full enterprise project suite.
Islands of Coherence	Place-based or network-based implementation and learning environments.	Stakeholder map, portfolio, cells, metrics, harvest and replication decision.	Local authority and adaptation remain essential.
Ikigai-inspired reflection	Explore meaning, capability, contribution and viable livelihood.	Purpose Compass, North Star, learning demand and milestone.	Not a psychometric test or destiny claim.
Doughnut Economics lens	Connect social foundations and ecological ceilings to pathway design.	Social need, ecological pressure, distribution and regeneration questions.	Decision lens, not certification or a single sustainability score.

Method or model	Intended use in PHOENIX	Platform-readable outputs	Boundary
Asset-Based Community Development	Begin with local capabilities and relationships as well as needs.	Asset, offer, relationship, institution and opportunity records.	Must not minimize structural barriers or unmet needs.
Community Tool Box practices	Community assessment, planning, participation and evaluation.	Stakeholder map, action plan, evaluation question and implementation record.	Applied selectively with source attribution.
World Cafe and participatory inquiry	Structured dialogue across diverse perspectives.	Questions, table harvests, patterns, missing voices and next actions.	Method use and marks require applicable authorization.
Theory of Change / logic model	Relate activities, outputs, outcomes, assumptions and evidence.	Results chain, assumptions, indicators and evidence plan.	Does not prove attribution by itself.
Systems and causal-loop mapping	Understand relationships, feedback, delays and leverage points.	Entity, relationship, loop, risk, intervention and scenario records.	Model remains a hypothesis open to correction.
Scenario design and backcasting	Explore possible futures and sequence action from a desired condition.	Scenario, assumptions, milestones, triggers and decision gates.	Not a prediction guarantee.
NIST-style AI risk management	Govern AI purpose, risks, measurement and controls.	Agent card, risk register, evaluation and incident record.	Final compliance scope requires qualified review.

3.2 Method-selection rule

For each programme or Action Room, the Product Owner and accountable steward should record:

1. the problem and decision to be supported;
2. the method selected and why;
3. the person or institution authorized to facilitate or approve it;
4. the expected artifacts;
5. the consent and data implications;
6. the evidence standard;
7. the correction or appeal route; and
8. the point at which the method should stop or escalate.

4. Model-Community Visualization and Decision Toolkit

The model community is a staged architecture, not a hierarchy of human worth. People enter through purpose and relationship; small teams build trust and learning; bounded cells act; place-based communities integrate the work; and networks share approved learning without centralizing authority.

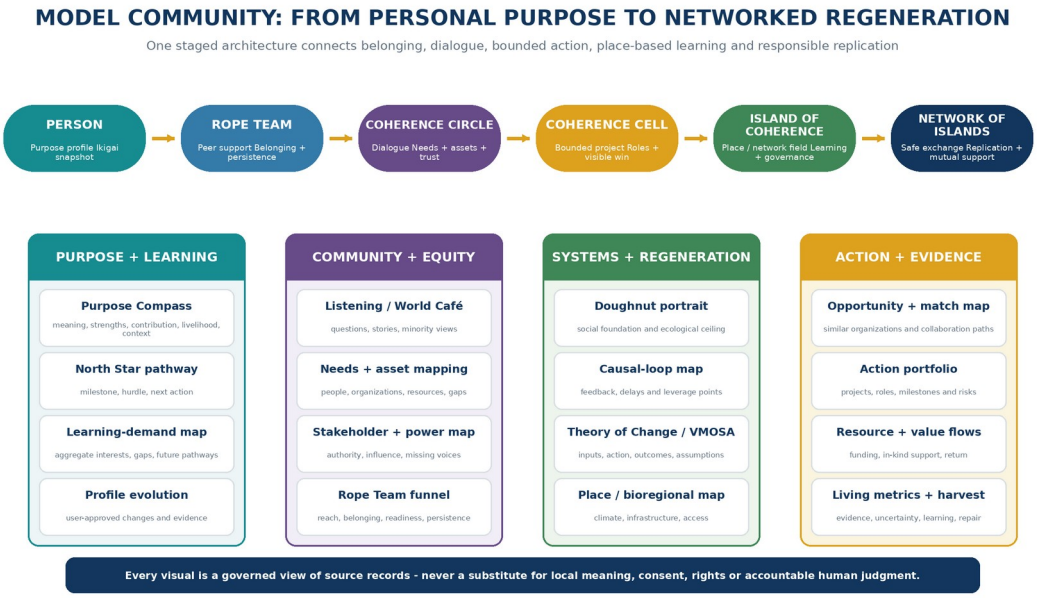

Figure 3. Model community: Person to Rope Team, Coherence Circle, Coherence Cell, Island of Coherence and Network of Islands.

4.1 Required visualization families

Visualization	Decision it supports	Minimum data	Guardrail
Purpose Compass	What is meaningful and feasible now?	User-confirmed reflections and constraints.	Private by default.
North Star pathway	What is the next milestone and why?	Goal, capability, hurdle, context and evidence.	Editable; no destiny claim.
Learning-demand map	What pathways are repeatedly requested?	Thresholded, de-identified demand signals.	No exposure of individual purpose data.
Needs-assets-offers map	What does the community need and already hold?	Cards with owner, visibility, availability and expiry.	Structural needs remain visible.
Stakeholder and power map	Who is affected, authorized, missing or influential?	Roles, relationships, authority and representation.	Avoid hidden political or demographic inference.
Relationship network	Where are connections, gaps and potential bridges?	Consented relationship claims.	Not a reputation score.
Systems / causal map	Which feedback loops shape the challenge?	Variables, links, assumptions and evidence.	Hypothesis, not fact.
Doughnut portrait	Which social and ecological pressures matter?	Local indicators and domain sources.	No universal composite score.
Opportunity and match map	Which collaborations merit exploration?	Purpose, need, offer, capacity, timing and trust readiness.	Steward review and mutual consent.
Action portfolio	Which actions are active, blocked or complete?	Charters, tasks, milestones, risks, resources and evidence.	Access follows role and project scope.
Resource and value flow	What resources enter, move and return value?	Resource commitment, restrictions, beneficiary and evidence.	No implied financial or impact guarantee.
Learning Harvest dashboard	What happened, what changed and what should follow?	Evidence, decisions, negative findings and next gates.	Public release requires approval.

4.2 Visualization quality rules

- Every graphic should state its purpose and data source.
- Labels must fit within visual boundaries and remain readable at presentation size.
- Aggregate views must disclose thresholds and missing data.
- Maps must show uncertainty and contested interpretations where relevant.
- No color or placement should imply a human ranking unless the measure is explicitly authorized.
- Users and communities need a visible correction route.
- Exported graphics must inherit the release state of their underlying records.

5. Purpose-to-Regeneration North Star

The North Star combines personal direction with community and planetary context. It asks not only “What do I want?” but also “What is meaningful, viable, equitable and regenerative under present conditions?”

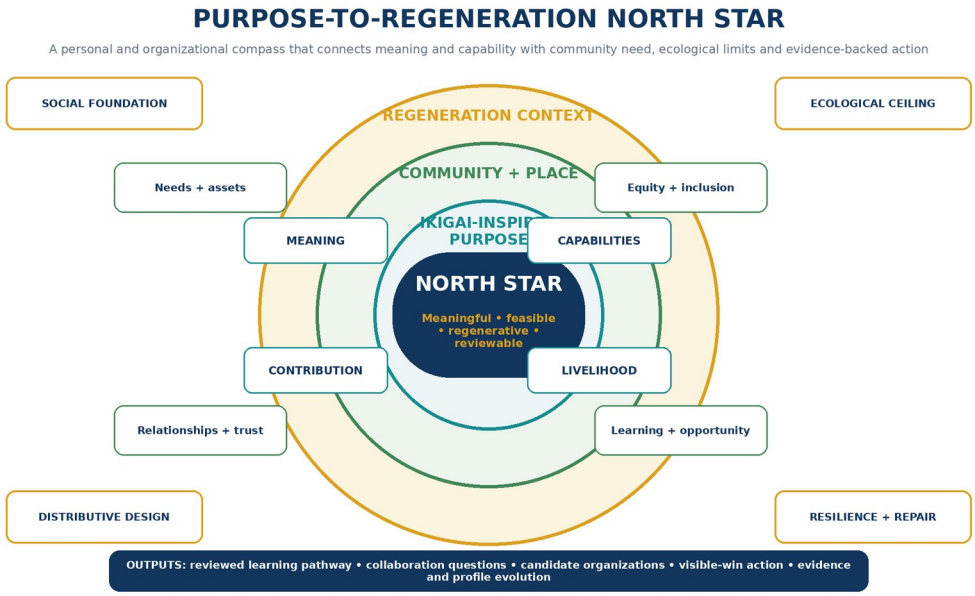

Figure 4. Purpose-to-Regeneration North Star: Ikigai-inspired purpose, community and place, social foundations, ecological ceilings and action.

5.1 Phase relationship

- **Milestone 1:** a lightweight Purpose Compass establishes a user-controlled baseline and first milestone.
- **Milestone 2:** the Purpose-to-Regeneration North Star adds community context, Doughnut-style questions, WSS axioms, adaptive learning and collaboration pathways.
- **Milestone 3:** appropriately aggregated signals inform community portfolios, educational planning and institutional decisions.

5.2 Purpose Compass domains

Domain	Example prompt	Stored output
Meaning	What matters enough to sustain your attention and care?	Purpose statement and themes.
Capability	What knowledge, skills, lived experience and relationships do you bring?	User-confirmed capability claims.
Contribution	Who or what would benefit from your contribution?	Intended beneficiaries and contribution modes.
Livelihood / viability	What conditions would make the pathway sustainable for you?	Time, income, role and resource constraints.
Community and place	Which people, institutions and ecosystems shape the work?	Context, relationships and place links.
Learning and opportunity	What must you learn, practise or access next?	Learning gap and pathway request.
Social foundation	Which essential human need could this support?	Social-domain tags and questions.
Ecological ceiling	Which ecological pressures or limits must be respected?	Ecological-domain tags and evidence needs.
Distribution and equity	Who benefits, bears risk or remains excluded?	Stakeholder and equity questions.
Regeneration and resilience	Can the pathway restore capacity rather than only reduce harm?	Regenerative hypothesis and indicators.

5.3 Six baseline questions

1. What meaningful outcome would you like to reach during the next three to twelve months?
2. What knowledge, experience, relationships or resources do you already bring?
3. What is currently blocking or slowing your progress?
4. How do you prefer to learn, contribute and collaborate?
5. What time, access, care, language or other constraints should the pathway respect?
6. What would be a credible first milestone, and who may need to be involved?

5.4 WSS Axioms and Values Policy Gate

The proposed Values Algorithm is an inspectable policy gate, not an automated morality score. Recommendations should be tested against:

- human dignity and agency;
- truth, provenance and uncertainty;
- consent and legitimate authority;
- pluralism without fragmentation;
- non-extraction and fair value return;
- care, safety and repair;
- regeneration of people and nature;
- subsidiarity and local sovereignty;
- transparency of technology; and
- responsible stewardship of resources.

A rule may **allow**, **allow with conditions**, **route for human review**, **pause**, or **prohibit** a proposed action. The system must record which rule fired, what evidence it used and who approved the outcome.

5.5 Educational demand intelligence

Institutions may receive threshold-protected, de-identified signals such as recurring learning interests, emerging capability needs, community problem themes, employer or livelihood signals and potential new course demand. Individual purpose records remain private unless the user chooses a more open visibility setting.

The POC must not claim to forecast an individual's future or automatically determine institutional curriculum. It may support human planning by showing patterns, uncertainty and the number of users requesting particular pathways.

5.6 Youth and school use

Use with minors is deferred to a separately governed workstream requiring age-appropriate design, applicable parental or guardian permission, child-safety review, strict data minimization, no manipulative prediction and clear transition or deletion rules at adulthood.

Part II - Users, Onboarding, Inclusion and Common Platform Kernel

6. Personas, Onboarding, Evolving Profiles and Warm Data

A persona is not a permanent account type. A person may hold several roles in different organizations, Circles and projects. Authorization therefore belongs to the relationship among person, role, organization, purpose, scope and time - not merely to a label on the user record.

6.1 Canonical role bundles

Role bundle	Primary outcome sought	Main dashboard	Permission boundary
Participant / learner / practitioner	Direction, learning, trusted relationships and meaningful action.	North Star, pathways, Circles, matches, projects, evidence and profile evolution.	Controls own profile, visibility and acceptance of suggestions.
Student	Purpose-linked learning, peer support, projects and portable evidence.	Learning pathway, Rope Team, course links, projects and portfolio.	Cannot see protected faculty, sponsor or peer data.
Faculty / learning steward	Understand learner needs, approve pathways and connect learning to application.	Cohort demand, pathway review, Circle health, evidence and partner opportunities.	Sees only consented learner data within assigned scope.
Facilitator / Circle steward	Hold safe process and move dialogue into learning and action.	Agreements, agenda, commitments, concerns, missing voices and harvest queue.	May not decide beyond the Circle's delegated authority.
Mentor / advisor / wisdom custodian	Offer bounded expertise, care or guidance.	Requests, consented context, pathways and review tasks.	Access is explicit, purpose-bound and revocable.
Community / implementation partner	Publish real needs, offer assets and verify relevant outcomes.	Needs, opportunities, Action Rooms, tasks, evidence and benefits.	May validate only the work and evidence within its authority.
Organization representative	Represent a named organization in an authorized scope.	Organization profile, opportunity portfolio, roles, risks, resources and outcomes.	Authority has scope, source and expiry; no implied institution-wide mandate.
Employer / industry partner	State capability demand, sponsor learning and support practical work.	Demand signals, talent pathways, projects and aggregate outcomes.	No hidden access to individual learner data.
Local authority / public agency	Connect community priorities, policy context and implementation pathways.	Place map, partner network, project portfolio and public-safe evidence.	Access depends on statutory and project authority.
Funder / sponsor observer	Understand allocation, evidence, risk and next-stage conditions.	Portfolio outcomes, evidence grades, access utilization and decision gates.	Reads approved aggregate and project information only.
Researcher / evaluator	Define methods and protect evidence discipline.	Metric registry, evidence maturity, authorized datasets and Learning Harvests.	Access is governed by a named research or evaluation scope.
Safety / wellbeing moderator	Receive concerns and support safe escalation.	Incident, appeal, referral and remedy queues.	Sensitive access is separated from programme analytics.
Programme administrator	Operate the pilot and manage approved configurations.	Users, roles, templates, content, review queues, entitlements and releases.	Overrides are attributable, exceptional and audited.
Platform administrator	Maintain technical operations.	System health, deployments, backups, logs, services and model usage.	No authority over programme, spiritual, research or funding decisions.

6.2 Eight-stage onboarding journey

Stage	User experience	Required record	Acceptance evidence
O1 Invitation and account	User sees who invited them, why and into which pilot or programme.	Invitation, inviter, context, intended role, expiry and revocation state.	Invitation cannot be reused after acceptance or revocation.
O2 Identity and context	User verifies account and confirms organization or community relationship.	Person, account, membership and organization context.	User can distinguish personal participation from formal representation.
O3 Role and authority	User requests or accepts a role and its limits.	Role assignment, approving authority, scope and expiry.	Sensitive roles require designated approval.
O4 Agreements	User chooses purposes for profile visibility,	Versioned consent receipts and agreement	Withdrawal changes future processing

Stage	User experience	Required record	Acceptance evidence
and consent	matching, AI, evaluation and public outputs.	acceptance.	and visibility.
O5 Access preferences	User chooses language, accessibility, bandwidth, time zone and notification preferences.	Preference set.	Priority flows remain usable on phone and assistive technology.
O6 Baseline profile	User enters or confirms purpose, skills, interests, needs, offers and constraints.	Profile Version 1 and atomic claims.	Material imported or AI-proposed claims require confirmation.
O7 Purpose and recommendations	User answers baseline questions and receives editable next-step suggestions.	Goal, milestone, hurdle, recommendation and explanation.	User can accept, edit, reject or defer.
O8 First meaningful action	User joins a Circle, saves a pathway, posts a card or enters an Action Room.	Activation event and next milestone.	Time-to-first-meaningful-action can be measured.

6.3 Evolving profile and profile instantiation

The platform should not silently overwrite one mutable profile. It should maintain:

- one stable Person record;
- immutable ProfileVersion snapshots;
- atomic ProfileClaim records;
- ActivityEvent records;
- separate AIProfileCandidate records;
- evidence and reviewer links;
- correction, revocation and expiry events; and
- a comparison view showing how the profile changed over time.

Profile claim states

State	Meaning	Promotion rule
Self-declared	Entered directly by the user.	Current when saved by the user.
Imported	Extracted from a user-provided CV, portfolio or profile export.	Requires user confirmation.
Activity-derived	Suggested from a completed platform activity.	Requires user approval and source link.
AI-proposed	Suggested by an approved model.	Never becomes current automatically.
Reviewer-verified	Confirmed by an authorized person within a defined scope.	Stores reviewer, authority and evidence.
Corrected	Replaced because the prior claim was inaccurate or incomplete.	Prior version remains in history.
Revoked / expired	No longer valid, permitted or current.	Excluded from active use while preserving audit history.

Profile field families

- identity and access;
- affiliation and role;
- purpose and values;
- skills and knowledge;
- interests and learning preferences;
- experience and evidence;
- needs, assets and offers;
- constraints, accessibility and care;
- trust, consent and visibility; and
- goals, milestones, outcomes and next actions.

The profile comparison experience should answer: What changed? When? Why? Based on what source? Was AI involved? Who approved it? Who can see it? How can it be corrected or removed?

6.4 Warm data controls

Warm data means context-rich information about relationships, lived experience, meaning, place, history and changing conditions. It is valuable precisely because it cannot be treated as a context-free score.

Required controls:

- private by default;
- field-level visibility;
- purpose-specific consent;
- aggregation thresholds;
- explicit expiry for sensitive contextual statements;
- correction and withdrawal;
- no sensitive-trait inference from behavior;
- no sale or unrelated model training;
- distinction between user statements and system interpretations; and
- institutional access only to authorized aggregate or individually shared views.

6.5 External profile import

The initial implementation may support user-supplied CVs, resumes, portfolios or authorized profile exports. It must not scrape LinkedIn or another restricted service. Imported claims remain unverified until the user confirms them, and the source file inherits an explicit retention and deletion policy.

7. Social Justice, Inclusion and Rope Team Alignment

Inclusion is not a demographic dashboard added after product development. It is expressed through recruitment, belonging, representation, access, facilitation, barrier removal, decision authority, benefit distribution and repair.

7.1 Rope Team pattern

A Rope Team is a small, persistent support structure inspired by the mountain-climbing metaphor of people connecting for safety, pacing and mutual progress. The term and exact practice should be validated with the relevant partner before institutional use.

Rope Team element	Platform behavior	Evidence
Shared destination	Members can see the agreed purpose and next milestone.	Team charter and milestone.
Mutual visibility	Members can share selected progress, barriers and support needs.	Check-in and consented status.
Belonging	Facilitator prompts surface who is absent, unheard or disconnected.	Participation continuity and missing-voice review.
Pacing and load	Users may signal availability, overload and care constraints.	Workload or support adjustment record.
Safety and repair	Concerns have a named escalation and remedy route.	Concern, response and repair state.
Learning and opportunity	Members can connect learning, mentors and practical opportunities.	Pathway, mentor and action links.
Transition	Teams may continue, graduate, merge or close with an approved harvest.	Closure state and Learning Harvest.

7.2 Inclusion and enrollment pathway

For education partners, the platform may support the pathway:

Awareness -> Interest -> Belonging -> Readiness -> Application -> Enrollment -> Persistence and Value

PHOENIX can measure its contribution to engagement and readiness, but it must not claim direct credit for official admissions or enrollment decisions without institutional attribution data.

7.3 Required equity metrics

- representation among invitees, participants, facilitators and decision roles where lawful and consented;
- invitation acceptance and onboarding completion by approved cohorts;

- missing-voice invitations and participation;
- barrier identification and resolution;
- sponsored-to-standard access mix;
- Rope Team and mentor continuity;
- belonging and psychological-safety signals;
- pathway readiness and application intent;
- institutional enrollment contribution where attribution is agreed;
- persistence and applied-learning evidence;
- concern, appeal and repair completion; and
- benefit distribution across communities and partner groups.

Metrics must use minimum reporting thresholds, suppress small cells and avoid using identity categories to rank individuals or target vulnerable groups.

8. Common Platform Kernel and Three Use-Case Packs

The architecture must build one reusable kernel. Differences among use cases should be expressed primarily through configuration, content, workflows, roles, metrics and dashboard templates rather than separate applications.

8.1 Common kernel modules

ID	Module	Mandatory functionality	Primary MVP proof
K01	Identity and invitations	Invite-only registration, verification, invitation provenance, expiry and revocation.	Invited user securely activates one account.
K02	Roles and authority	Multi-role users, organization context, scope, approver and expiry.	Access changes correctly with role and context.
K03	Consent and visibility	Purpose-specific consent, field visibility, withdrawal, correction and audit.	Consent change changes processing and display.
K04	Evolving profile	Baseline profile, claims, versions, comparison and approved evolution.	User creates Version 1 and approves a later change.
K05	Purpose Compass / North Star	Goal, milestone, hurdle, next action and explanation.	User receives and edits a credible first pathway.
K06	Collaboration Circles	Purpose, agreements, agenda, communication, reflections, commitments, concerns and harvests.	Facilitator runs one complete Circle cycle.
K07	Rope Teams	Small support teams, check-ins, barriers, mentors and continuity.	Under-represented learner pathway can be supported without exposing private data.
K08	Needs, Assets and Offers	Structured cards with owner, availability, visibility, expiry and status.	User publishes and updates one card.
K09	Opportunities and Match Briefs	Explainable fit, gaps, steward review and consent to introduction.	Approved suggestion leads to a mutually accepted conversation.
K10	Action Rooms / Coherence Cells	Charter, roles, tasks, decisions, risks, resources, milestones, evidence and visible wins.	Team completes a milestone with linked evidence.
K11	Change Objects	Context, intended change, stakeholders, outcomes, risks, dependencies, governance, metrics and versions.	A Circle output becomes an approved action object.
K12	Learning pathways	Approved sources, learning atoms, short pathways, review and completion.	User completes a reviewed pathway and applies it.
K13	Evidence Locker	User- and project-owned artifacts, reviewer comments, grades and export.	Evidence can be linked, reviewed and exported.
K14	Living Metrics	Metric definitions, observations, evidence state, interpretation and decision gates.	Dashboard distinguishes measurement from missing evidence.
K15	Communications Repository	Recordings, transcripts, notes, decisions, chats, commitments, search and linkage.	Authorized artifact is stored, found and linked to work.
K16	Human-governed AI	Source retrieval, draft, review, release, model / prompt record and audit.	Consequential AI content cannot release without approval.

ID	Module	Mandatory functionality	Primary MVP proof
K17	Payment and entitlements	Products, plans, checkout, subscriptions, sponsored seats, webhooks, access and billing portal.	Verified payment or sponsor allocation activates correct access.
K18	Steward and admin console	Users, roles, agreements, content, reviews, incidents, metrics, payments and releases.	Authorized steward manages the pilot without database access.

8.2 Use-case configuration model

Each use-case pack should define:

- branded landing and onboarding language;
- approved role templates;
- Purpose Compass prompts;
- Circle and Rope Team templates;
- learning sources and pathway templates;
- organization and opportunity categories;
- Action Room and Change Object templates;
- evidence types and metric passports;
- dashboard views;
- payment products and entitlement rules;
- consent and release wording; and
- exclusions and escalation routes.

8.3 Education / LMS Constellation pack

Functional configuration

- learner purpose and capability profile;
- short diagnostic and reviewed learning pathway;
- course and LMS deep links;
- faculty / mentor review;
- Rope Team and learning Circle;
- employer, alumni or community Match Brief;
- project studio through an Action Room;
- competency and contribution evidence;
- portfolio export;
- aggregate learning-demand dashboard; and
- campus-community opportunity mapping.

MVP outcome

A learner moves from onboarding to a personalized pathway, a trusted support group, one practical connection or project, and evidence-backed profile growth. A university sees aggregated learning demand, participation, pathway activation and project evidence without gaining hidden access to private warm data.

Deferred or conditional

Full roster synchronization, grade passback, institutional SSO, formal credentials, automated grading, unrestricted labor-market prediction and use with minors.

8.4 Seva Hub pack

Functional configuration

- practitioner purpose, practice and service preference;
- Seva Circle and stewardship template;
- intention or dedication entry;
- service pledge;
- local need, offer and opportunity card;
- steward-reviewed connection;

- Seva Action Room;
- evidence of a completed act;
- service, continuity and care dashboard;
- rights-cleared wisdom source library; and
- safety, spiritual-distress and wellbeing escalation route.

MVP outcome

A participant translates intention into a practical, stewarded act of service and the community can see continuity, verified service and learning without turning spiritual practice into a leaderboard.

Deferred or conditional

Always-on sanctuary infrastructure, all contemplated practice modalities, large-scale multilingual operations, embedded donor disbursement, broad spiritual guidance and Island replication at network scale.

8.5 Women's Empowerment pack

Functional configuration

- leadership-purpose profile;
- leadership and resilience learning pathway;
- mentorship preferences and Match Brief;
- women-led Circle or Rope Team;
- storytelling and evidence artifact;
- women-led Action Room;
- opportunity and resource cards;
- microgrant application-status workflow without disbursement;
- safe support and referral routing; and
- aggregate leadership, opportunity and project dashboard.

MVP outcome

A participant clarifies a leadership direction, develops capability, forms a consensual mentor or opportunity connection, contributes to a women-led project and retains evidence of advancement.

Deferred or conditional

Automated workplace-equity adjudication, psychometric ranking, bias enforcement, blockchain credentials, virtual-reality simulation, automated funding decisions and clinical wellbeing services.

Part III - Coherence Concierge, Communications Memory, Matching, Learning and Evidence

9. Coherence Concierge and Governed Agent Operating Architecture

The Coherence Concierge is the single user-facing AI guide. It coordinates bounded specialist agents behind a common trust, values, evidence and memory control plane so the user is not asked to understand a confusing collection of models and services.

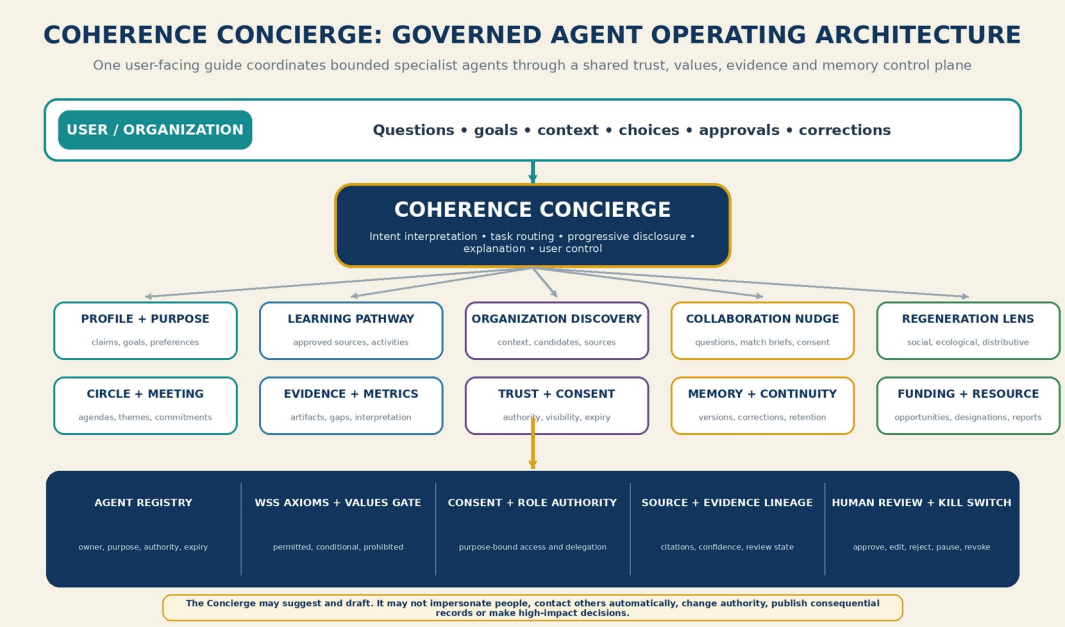

Figure 5. Coherence Concierge architecture: one user-facing guide, bounded specialist agents and a shared registry, policy, source, review and audit layer.

9.1 Specialist agent catalogue

Agent	Permitted purpose	Typical inputs	Draft outputs	Human owner
Profile and Purpose Agent	Help interpret user-confirmed purpose, capabilities, needs and constraints.	Profile claims, Purpose Compass, activities.	Editable summary, question, profile candidate.	User; programme steward for templates.
Learning Pathway Agent	Assemble short, cited pathways from approved sources.	Learning goal, baseline, constraints, source library.	Pathway, activity, reflection and evidence prompt.	Faculty, mentor or content steward.
Organization Discovery Agent	Find candidate organizations that appear similar or complementary.	Organization profile, geography, purpose, needs and public sources.	Candidate cards and exploration questions.	Organization representative or match steward.
Collaboration Nudge Agent	Suggest gradual next steps toward collaboration.	Needs, offers, purpose, timing, authority and history.	Question, Match Brief draft, introduction request.	Match steward and both parties.
Regeneration Lens Agent	Apply social, ecological, equity and regenerative questions.	Proposed pathway, place, sector and approved sources.	Risks, opportunities, evidence questions.	Domain or regeneration steward.
Circle and Meeting Agent	Structure agendas and draft harvests from authorized records.	Notes, transcripts, commitments, concerns and artifacts.	Themes, decisions, commitments, missing voices and Change Objects.	Facilitator or project lead.
Evidence and Metrics Agent	Identify evidence gaps and draft contextual interpretations.	Metric passport, artifacts, observations and project state.	Evidence map, missing-data prompt, narrative draft.	Evaluator or metric owner.
Trust and Consent Agent	Check authority, consent, sensitivity, release and policy conditions.	Record Passports, roles, consents and agent request.	Allow, condition, route, pause or prohibit decision.	Trust / data steward.

Agent	Permitted purpose	Typical inputs	Draft outputs	Human owner
Memory and Continuity Agent	Retrieve authorized history and support version comparison.	Profile versions, repository records, decisions and harvests.	Timeline, continuity summary, unresolved item.	Record owner and steward.
Funding and Resource Agent	Organize resources, restrictions, partner contributions and evidence needs.	Opportunity, resource, sponsor and outcome records.	Resource map, funding question, reporting checklist.	Programme and finance steward.

9.2 Agent operating contract

Every agent requires an Agent Card containing:

- identifier and version;
- accountable owner;
- declared purpose;
- permitted inputs;
- prohibited inputs and inferences;
- authorized tools and data sources;
- authority class;
- required consent;
- output type and review rule;
- confidence or uncertainty treatment;
- logging and retention;
- evaluation tests;
- failure and escalation behavior;
- revocation condition; and
- release status.

Agent authority classes

Class	Meaning	Example
A0 - Retrieve	Return approved source material without interpretation beyond search.	Find a policy or course resource.
A1 - Suggest	Ask questions or offer non-consequential options.	Suggest next reflection prompt.
A2 - Draft	Produce a draft that requires named human approval.	Draft a Learning Harvest or Match Brief.
A3 - Execute bounded internal action	Perform a reversible platform action after explicit user approval.	Save an approved draft or schedule an in-app reminder.
A4 - External or consequential action	Reserved; not authorized in the POC without a separately approved control design.	Contact an organization, release public content or move funds.

9.3 Concierge request pipeline

1. User states a question or goal.
2. Identity, role, purpose and active context are resolved.
3. Consent, sensitivity, visibility and authority are checked.
4. The request is classified and routed to the smallest suitable agent.
5. Approved sources and authorized memory are retrieved.
6. WSS axioms and programme rules are applied.
7. The agent drafts an answer, question or action proposal.
8. Required human review is enforced.
9. The user sees sources, explanation, uncertainty and available controls.
10. Approved changes are saved as new records or versions, never silent mutations.

9.4 Evolving with the user

The Concierge may adapt through approved profile versions, learning history, project participation, evidence artifacts, commitments, accepted recommendations and declared preferences. It may not create hidden psychological, political, religious, health or vulnerability profiles from behavior.

The user should be able to inspect a **Memory and Agency Panel** showing:

- what the Concierge remembers;
- the source of each item;
- why it is relevant;
- its visibility and expiry;
- whether it is self-declared, imported, activity-derived, AI-proposed or verified;
- which agents may use it; and
- how to correct, remove or restrict it.

10. Project Communications and Recordings Repository

The repository converts authorized project communication into governed, searchable memory. It is not simply file storage. Each artifact must be linked to purpose, consent, people, project context, retention, evidence and release state.

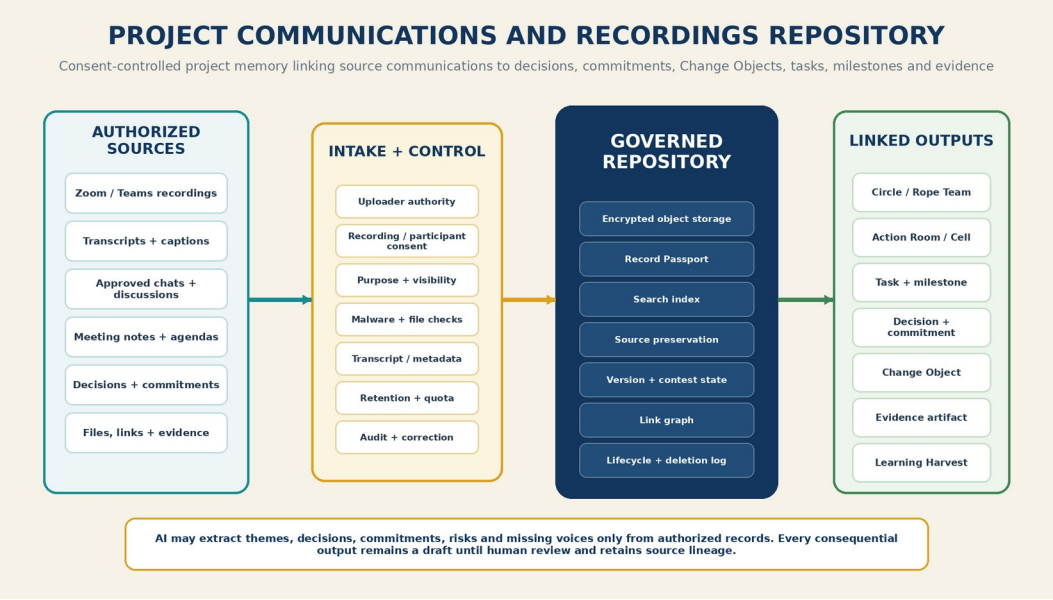

Figure 6. Communications repository: authorized sources, controlled intake, governed storage and links to Circles, Action Rooms, decisions, evidence and Learning Harvests.

10.1 Minimum repository capability

ID	Capability	Functional requirement	Acceptance evidence
R01	Authorized upload	Approved users upload recordings, transcripts, notes, chats, files and evidence.	Unauthorized role is denied and event is logged.
R02	Recording consent	Store meeting-specific recording and AI-processing consent.	Record cannot enter AI workflow without applicable consent.
R03	Metadata capture	Record source, meeting, participants, owner, date, content type, sensitivity and visibility.	Search and permission tests use metadata correctly.
R04	Container and linkage	Link artifact to Circle, Rope Team, Action Room, task, milestone, decision, Change Object or evidence record.	User can navigate both directions.
R05	Search and filters	Search approved text and metadata by project, date, participant, tag and record type.	Results respect role and visibility filters.
R06	Transcript and caption support	Preserve original and edited transcript versions.	Edits retain source lineage and reviewer.
R07	Decision and commitment extraction	AI may draft themes, decisions, commitments, risks,	Draft remains unreleased until human

ID	Capability	Functional requirement	Acceptance evidence
		questions and missing voices.	review.
R08	Version and correction	Preserve source, corrected and approved versions.	Prior versions remain auditable.
R09	Retention and deletion	Apply record-class retention, legal hold where authorized, expiry and approved deletion.	Scheduled and user-requested actions are logged.
R10	Storage quota	Show usage and quota by tenant, programme or container.	Users receive warning before limit is reached.
R11	Export	Authorized export of source, metadata, decisions, evidence and audit summary.	Export inherits release state and excludes unauthorized records.
R12	Audit	Log upload, view, download, AI processing, edit, review, release, retention and deletion.	Steward can inspect event history.
R13	Security	Encryption in transit and at rest, malware scanning, signed access and backup.	Security tests and recovery demonstration pass.

10.2 Zoom and Microsoft Teams boundary

The contractual baseline should be manual, authorized import of files or exports supplied by an authorized user. Direct connectors are conditional enhancements requiring confirmation of:

- API availability and tenant permissions;
- account and licensing requirements;
- meeting organizer authority;
- chat, caption and recording export scope;
- participant consent and notification;
- data residency and retention;
- storage and processing implications;
- webhook or polling behavior;
- duplicate detection and idempotency;
- connector error handling;
- revocation and deletion propagation; and
- ongoing operational responsibility.

Until these items appear in the Statement of Work and acceptance tests, direct Zoom / Teams integration should be described as **architecturally anticipated but not fully contracted**.

10.3 In-platform communications

The POC may include Circle messages, announcements, comments and task discussions. The Statement of Work must specify which communications are retained, whether edits and deletions preserve audit history, which users may export them and how they relate to repository retention classes.

10.4 Repository record classes

Record class	Examples	Default treatment
Source communication	Recording, transcript, approved chat export.	Restricted; consent and retention required.
Working note	Agenda, draft note, participant reflection.	Private or team-limited; editable with history.
Decision record	Approved decision, rationale, authority and date.	Durable within project scope.
Commitment record	Owner, action, due state and completion evidence.	Retain through closure and harvest.
Evidence artifact	File, link, observation or verified outcome.	Retain according to evidence policy.
AI draft	Themes, summary, match, pathway or metric narrative.	Draft state; source-linked; not authoritative.
Approved harvest	Reviewed learning, concerns, negative findings and next steps.	Release-controlled and portable.
Incident / appeal	Concern, response, remedy and decision.	Highly restricted with separate access.

11. Needs, Assets, Offers, Organization Discovery, Matching and Action

11.1 Needs, assets and offers cards

Each card should include:

- type: need, asset, offer, opportunity, funding request or action request;
- owner and authorized representative;
- purpose and description;
- place, community or programme context;
- availability, quantity or capacity where relevant;
- start, end and expiry;
- visibility and sharing scope;
- required skills, relationships or permissions;
- evidence or source links;
- risk, sensitivity and safeguarding tags;
- current state; and
- correction, withdrawal and closure controls.

11.2 Organization intake

The Concierge may ask an authorized representative about:

1. mission and intended social or ecological contribution;
2. sector, geography and communities served;
3. current programmes and projects;
4. capabilities, assets and offers;
5. needs, constraints and dependencies;
6. partnership history and readiness;
7. learning, workforce or research interests;
8. evidence and public sources;
9. role authority and who may approve collaboration; and
10. preferred pace and first low-risk step.

11.3 Candidate organization suggestions

The Organization Discovery Agent may present up to ten candidate organizations that appear similar, complementary, locally relevant or capable of filling a gap. Each card must state:

- why the organization was suggested;
- source and last-checked date;
- mission or regenerative relevance;
- complementary capabilities;
- potential gaps, conflicts or uncertainty;
- geography and programme context;
- a low-pressure question to explore;
- whether an introduction route is known;
- whether a steward review is required; and
- a control to dismiss, save or request review.

The system may not scrape unauthorized data, contact an organization automatically or imply endorsement.

11.4 Match Brief dimensions

Dimension	Question
Shared purpose	Is there a credible area of purpose overlap?

Dimension	Question
Need / offer fit	Does one party's offer address the other's stated need?
Capacity	Do the parties have sufficient time, capability and resources?
Context	Are place, sector, community and institutional conditions compatible?
Trust readiness	Is role authority clear and are there relationship or safety gaps?
Timing	Is there a suitable window for exploration or action?
Regenerative value	Could the collaboration contribute social, ecological or capability value?
Risk and dependency	What could block, harm or distort the relationship?
Evidence	What sources support the suggestion and what remains uncertain?
First step	What reversible, low-pressure action would test fit?

11.5 Gradual collaboration ladder

1. View a candidate card.
2. Compare purpose, needs, offers and context.
3. Ask or save an exploration question.
4. Request steward review.
5. Approve a Match Brief.
6. Obtain mutual consent to introduction.
7. Hold an exploratory conversation.
8. Form a Circle, Rope Team or Action Room only if both parties agree.
9. Record outcome, reasons and lessons without penalizing a declined match.

11.6 Action Rooms and Change Objects

Action Rooms are lightweight implementation spaces. Each room should support:

- purpose and charter;
- members, roles and authority;
- stakeholder map;
- related Change Objects and Opportunity Cards;
- tasks, dependencies and milestones;
- timeline and current state;
- decisions and rationale;
- risks and issues;
- resource commitments;
- communications and repository links;
- evidence uploads;
- visible-win records;
- metric passports and observations;
- status history; and
- closure, Learning Harvest and next-cycle decision.

A Change Object should include context, affected people and systems, intended outcome, assumptions, risks, dependencies, governance conditions, evidence needs, owner, version and release state.

12. Human-Reviewed AI, Adaptive Learning, Evidence and Learning Harvests

12.1 Required AI control loop

Capture -> Retrieve -> Draft -> Human Review -> Release -> Log -> Correct / Revoke

Consequential outputs include profile changes, Match Briefs, public summaries, project decisions, evidence interpretations, funding narratives, governance conclusions and any content used to affect access, role or reputation.

12.2 Bounded AI capabilities

Capability	Permitted function	Required guardrail
Profile extraction	Extract candidate skills, experiences and interests from user-supplied material.	User confirms every material claim.
Diagnostic synthesis	Turn baseline answers into an editable goal and gap summary.	No psychometric or employability label.
Micro-pathway generation	Assemble a short sequence from approved learning atoms.	Sources cited and human approval required.
Circle harvest	Draft themes, decisions, commitments, risks and missing voices.	Facilitator approves before release.
Match rationale	Explain complementary purpose, needs, capabilities, timing and gaps.	Steward review and mutual consent.
Project assistance	Draft tasks, questions, risks, milestones and summaries.	Project lead approves official records.
Profile evolution	Propose a claim or milestone from approved evidence.	User accepts, edits or rejects.
Metric narrative	Summarize evidence, uncertainty and missing data.	Cannot invent a measurement or erase negative findings.
Knowledge Q&A	Answer from an approved corpus with citations.	No approved source means no authoritative answer.
Organization discovery	Retrieve public or authorized organization information.	Show source, date and uncertainty; no automatic outreach.

12.3 Ad hoc learning pathway workflow

1. Diagnose the user's goal, baseline, blockers, time and learning preferences.
2. Retrieve relevant, rights-cleared and approved learning atoms.
3. Apply purpose, accessibility, community and regenerative context.
4. Assemble a short pathway with learning outcomes and estimated effort bands.
5. Cite every source and distinguish retrieved content from generated guidance.
6. Route for faculty, mentor or custodian review where required.
7. Deliver activities, reflection prompts and practical application.
8. Connect the learning to a Circle, project, service act or evidence task.
9. Update the profile only after user approval and evidence linkage.

12.4 Learning atom schema

Each learning atom should include title, purpose, domain, source, rights state, learning level, language, accessibility features, expected activity, estimated effort band, prerequisite, evidence prompt, reviewer, version, expiry and use-case tags.

12.5 Evidence Locker

Each participant should have a portable evidence area containing:

- approved reflections;
- learning artifacts;
- participation records;
- project and service evidence;
- visible-win evidence;
- reviewer comments;
- evidence grades;
- related profile claims and competencies;
- ownership, consent and release metadata; and
- PDF, Markdown or structured-data export where authorized.

Formal credential issuance is not included unless separately approved through the responsible institution.

12.6 Learning Harvest

A Learning Harvest should capture:

- original purpose and context;
- who participated and whose voice was missing;
- key themes and decisions;
- commitments and completion state;
- outcomes and supporting evidence;
- negative findings and unintended effects;
- trust, inclusion or repair issues;
- resource use and partner contributions;
- what should continue, change, stop or be tested next;
- release state; and
- links to source records, metrics and Change Objects.

Part IV - Success Definition and Three Milestone Releases

13. Success Definition, Pilot Boundaries and Explicit Exclusions

13.1 End-to-end proof

The POC succeeds when it can demonstrate one complete, governed loop:

1. An invited adult user creates an account.
2. The user understands role, agreement, consent and visibility conditions.
3. The user creates a baseline profile and lightweight Purpose Compass.
4. The platform presents an explainable next step.
5. The user enters a Circle, Rope Team, learning pathway or opportunity flow.
6. A steward-reviewed connection or Action Room is formed.
7. Communication, decisions, commitments and tasks are retained in context.
8. The user or team completes a practical milestone.
9. Evidence is attached and reviewed.
10. A Learning Harvest is approved.
11. The user sees an approved evolution of the profile or pathway.
12. An institution or sponsor sees only the aggregate or project evidence it is authorized to see.

13.2 Pilot envelope

Boundary	Required treatment
Deployment	Staging and pilot environments with WSS-controlled access and deployment records.
Tenancy	Initial pilot may operate as one tenant, but every core record carries a tenant or pilot identifier.
Participants	Invited adult cohort; exact numbers confirmed in the Statement of Work.
Use cases	Education, Seva Hub and Women's Empowerment configured on the common kernel.
Devices	Responsive Progressive Web App for phone, tablet and desktop.
Language	English-first, localization-ready architecture.
AI	Retrieval, drafting, synthesis, explanation and suggestions under human review.
Meetings	External meeting links; manual authorized import is baseline.
LMS	Secure deep links; full institutional integration is conditional.
Evidence	Files, links, reflections, decisions, observations and reviewer states.
Payments	Hosted payment pages and provider-independent entitlement logic.
Support	Pilot operating support, documented escalation and handover.

13.3 Explicit exclusions unless separately contracted

- public self-registration;
- minors and parental-consent workflows;
- native iOS or Android applications;
- embedded video-conferencing infrastructure;
- continuous global live-stream operations;
- institutional single sign-on;
- full LMS roster and grade synchronization;
- formal credential issuance;
- payment escrow, marketplace payouts or grant disbursement;
- blockchain, decentralized identity wallets or trust registries;
- virtual-reality training;

- unrestricted web crawling or social-profile scraping;
- autonomous external agents;
- automated moderation, sanctions, admissions, employment, promotion, funding or clinical decisions;
- psychological, spiritual or medical diagnosis;
- production-scale multi-tenancy;
- enterprise data warehouse replacement;
- guaranteed financial, educational, employment, climate, leadership or wellbeing outcomes; and
- any partner, institutional or public claim not separately authorized.

14. Milestone 1 - Trusted Participation and Revenue-Enabled Foundation

Milestone 1 creates the smallest complete collaboration and revenue loop. It should be robust enough to operate a controlled pilot and instrument learning from the first user onward.

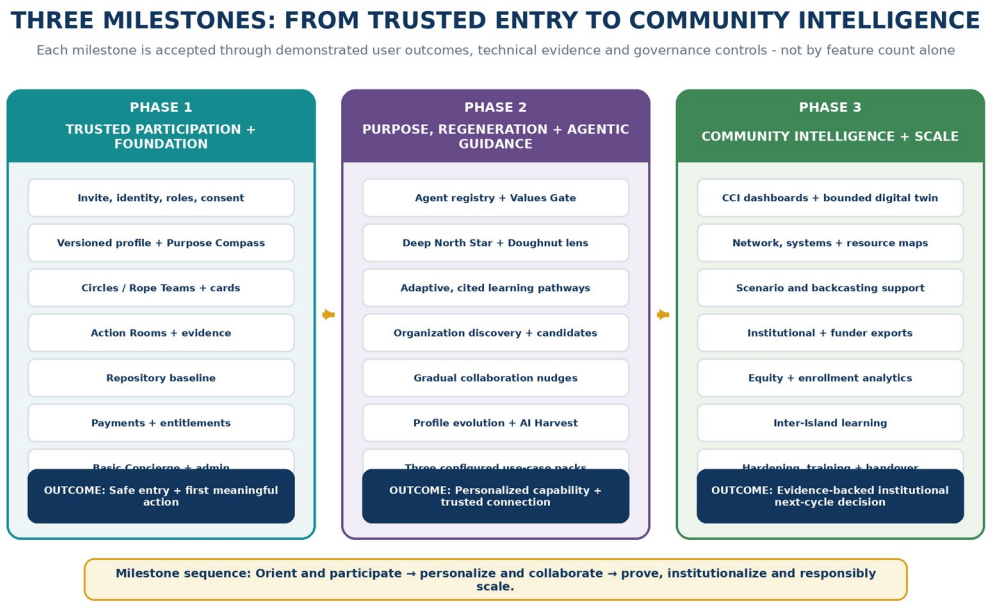

Figure 7. Three milestone releases: trusted foundation, agentic purpose and regeneration, then community intelligence and responsible scale.

14.1 Feature, functionality, MVP and outcome map

Feature	Required functionality	MVP demonstration	User or institutional outcome
PWA and role-aware dashboard	Responsive navigation, active role, programme context, alerts and next actions.	User completes priority flows on phone and desktop.	A clear, accessible entry point rather than a generic feed.
Invitation and authentication	Invitation provenance, verification, expiry, revocation and session security.	One-time invitation activates correct account and context.	Trusted entry and reduced impersonation risk.
Roles and organization context	Multi-role assignment, approver, scope, expiry and separation of duties.	Access test proves role and context boundaries.	Users know when they act personally or for an organization.
Agreements, consent and visibility	Purpose-specific consent, field visibility, withdrawal and audit.	Consent change affects display and processing.	User retains agency over personal and warm data.
Versioned profile	Profile Version 1, atomic claims, source states and comparison.	User confirms imported claim and later approves an update.	A developmental profile that can evolve with evidence.
Lightweight Purpose Compass	Six baseline questions, first milestone, hurdle and next action.	User edits and saves a credible first pathway.	Orientation and a practical North Star.
Circles and Rope Teams	Purpose, agreements, membership, agenda, check-ins, commitments, concerns and reflections.	Facilitator completes one session cycle.	Belonging, support and structured participation.
Needs, assets and offers	Create, edit, expire, filter and control card visibility.	Participant publishes a card and receives one relevant response.	Personal and community capacity becomes actionable.

Feature	Required functionality	MVP demonstration	User or institutional outcome
Action Rooms and Change Objects	Charter, roles, tasks, milestones, risks, decisions, resources and evidence.	Team completes a milestone with traceable decision and artifact.	Discussion moves into accountable action.
Evidence Locker	Upload, link, review, grade and export evidence.	User links evidence to a milestone and profile claim.	Portable proof of learning and contribution.
Repository baseline	Authorized upload, metadata, linkage, search, retention and audit.	Transcript or note is linked to Circle and decision.	Shared memory is organized and retrievable.
Basic Concierge	Explain navigation, retrieve approved resources, ask purpose questions and draft non-consequential text.	User sees sources, explanation and AI disclosure.	Guided use without pretending the AI is an authority.
Payment and entitlement foundation	Product catalogue, checkout, subscription, one-time access, sponsorship, webhook and billing portal.	Sandbox transaction or sponsor allocation activates the correct entitlement.	Users and partners can fund access transparently.
Steward and admin console	Users, roles, agreements, review queues, repository, entitlements and audit.	Steward operates pilot without database intervention.	Practical administration and accountable oversight.
Starter metrics	Activation, Circle continuity, commitments, evidence, review compliance and access mix.	Dashboard distinguishes measured, missing and provisional data.	Early learning without vanity metrics.

14.2 What users and institutions pay for in Milestone 1

Individual outcome bundle

A trusted start: secure access, a user-controlled profile, a Purpose Compass, a first milestone, relevant learning or community access, participation in a Circle or project, and the beginning of an evidence portfolio.

Institutional outcome bundle

A safely activated cohort: controlled invitations, roles and consent; a configured workspace; at least one functioning Circle and Action Room; basic payment or sponsored access; and dashboard evidence showing who activated, participated and moved into meaningful action.

14.3 Acceptance gate

Milestone 1 is accepted only when:

- priority user flows pass on agreed devices and browsers;
- invitation, authentication, role and tenant-isolation tests pass;
- consent changes propagate correctly;
- profile versioning and correction work;
- Circle and Action Room workflows complete end to end;
- evidence can be linked, reviewed and exported;
- repository permissions, retention metadata and audit events work;
- hosted payment and sponsored-access tests activate and remove entitlements correctly;
- critical actions are attributable;
- backup and restore are demonstrated; and
- no open critical security, privacy or data-isolation defect remains.

15. Milestone 2 - Purpose, Regeneration and Agentic Guidance

Milestone 2 turns the foundation into a personalized and context-aware guidance system while retaining human review, source lineage and gradual collaboration.

15.1 Feature, functionality, MVP and outcome map

Feature	Required functionality	MVP demonstration	User or institutional outcome
Coherence Concierge orchestration	Route requests through identity, context, consent, source, values and review controls.	One request invokes an approved agent and records the full decision lineage.	A consistent guide rather than disconnected AI features.
Agent registry and authority	Agent Cards, versions, authority classes, tools, tests, revocation and incident state.	Administrator disables an agent and prevents further use.	Inspectable and controllable AI behavior.

Feature	Required functionality	MVP demonstration	User or institutional outcome
Deep Purpose-to-Regeneration North Star	Ikigai-inspired domains, community context, social foundations, ecological ceilings and equity.	User receives an editable pathway with explicit assumptions and evidence questions.	Purpose is connected to viable and regenerative action.
WSS Values Policy Gate	Allow, condition, review, pause or prohibit rules with explanations.	A prohibited request is safely refused and routed.	Values become operational rather than decorative.
Adaptive learning pathways	Approved sources, learning atoms, accessibility, review, completion and application.	User completes a short pathway linked to an evidence task.	Personalized learning with practical application.
Organization intake and discovery	Guided organization profile, source retrieval and up to ten candidate cards.	Authorized representative reviews candidates and dismisses or saves them.	Wider awareness of relevant and complementary organizations.
Explainable Match Briefs	Purpose, fit, capacity, context, trust, timing, risk and first step.	Steward-approved brief leads to mutual introduction consent.	Trusted connection without automated matchmaking pressure.
Gradual collaboration nudges	Explore, compare, ask, review, consent, meet and activate.	User advances or stops at each reversible step.	Collaboration develops at a human pace.
AI Learning Harvest	Source-linked draft of themes, decisions, commitments, risks and missing voices.	Facilitator edits, approves and releases one harvest.	Meetings produce usable memory and follow-through.
Profile evolution candidate	Suggest evidence-backed changes with user approval.	User accepts, edits or rejects a candidate.	Concierge evolves with the user without silent profiling.
Aggregate education-demand intelligence	Thresholded, de-identified demand patterns and trend views.	Institution sees a pattern without accessing individual private records.	Better course and pathway planning.
Three configured use-case packs	Education, Seva and Women's Empowerment templates, sources, roles, metrics and dashboards.	Each pack completes one end-to-end scenario.	One kernel proves adaptability across distinct contexts.

15.2 What users and institutions pay for in Milestone 2

Individual outcome bundle

Personalized progress: a reviewed learning and action pathway, transparent AI guidance, a relevant mentor, peer, organization or opportunity suggestion, gradual consent-based connection, applied action and evidence-backed profile development.

Institutional outcome bundle

Purpose-to-program intelligence: configured pathways, human-review workflows, organization and community connections, aggregate learning-demand signals, applied projects and Learning Harvests showing what participants learned and did.

15.3 Acceptance gate

- Every agent has an approved Agent Card and evaluation suite.
- Consequential AI outputs cannot release without required review.
- Sources and memory items are visible and permission-filtered.
- A user can inspect, correct or remove applicable Concierge memory.
- No introduction occurs without mutual consent.
- Candidate-organization suggestions show source, date and uncertainty.
- The Values Policy Gate records its rule and human decision.
- Each use-case pack completes its agreed scenario.
- Prohibited AI test cases fail safely.
- Aggregate demand views enforce threshold and privacy rules.

16. Milestone 3 - Community Intelligence, Evidence and Responsible Scale

Milestone 3 connects personal pathways and project activity into community-level intelligence, institutional decisions, funder-ready evidence, replication learning and stable operations.

16.1 Feature, functionality, MVP and outcome map

Feature	Required functionality	MVP demonstration	User or institutional outcome
CCI dashboards	Sense, interpret, deliberate, align, act, evidence, learn / repair and evolve views.	One pilot portfolio shows current state and unresolved evidence.	Shared understanding of community action without a single score.
Network and relationship maps	Consented relationships, organizations, projects, gaps and bridges.	Authorized map distinguishes verified, declared and inferred links.	Better coordination and missing-voice visibility.
Bounded community digital twin	Reviewable representation of people, projects, resources, place, risks and scenarios.	Stakeholders correct the model and record disagreement.	A shared working model, not an automated authority.
Systems and scenario support	Causal maps, future scenarios, backcasting and decision triggers.	Team compares options and records assumptions.	More disciplined strategic choice.
Regenerative portfolio	Economic, ecological and social / capability value side by side.	Action Rooms report contextual value and evidence grades.	Sustainability and justice remain part of operational decisions.
Equity and engagement analytics	Invitation, belonging, barriers, Rope Team continuity, readiness and attribution-safe enrollment signals.	Small-cell suppression and access controls pass.	Expansion strategies can be evaluated without exploiting participants.
Institutional and funder exports	Approved project, evidence, access, ROI, risk, negative findings and next-gate package.	Export matches authorization and source records.	Decision-ready reporting and external funding readiness.
Replication and inter-Island learning	Templates, configuration packages, pattern cards and local adaptation records.	One approved pattern is reused with local changes documented.	Scale through learning, not copying.
Hardened operations	Monitoring, recovery, accessibility remediation, support, training and handover.	Operational readiness and recovery tests pass.	A pilot that can be responsibly continued.
Conditional direct connectors	Approved Zoom / Teams or LMS integration where discovery and controls are complete.	Connector passes authorization, consent, retry and deletion tests.	Reduced administrative effort without weakening governance.

16.2 What users and institutions pay for in Milestone 3

Individual outcome bundle

Portable proof and a next-stage pathway: an evidence-backed record of learning, relationships, projects and capabilities, together with a clear continuation, employment, service, leadership or further-learning pathway.

Institutional outcome bundle

A decision-ready pilot: stakeholder and system maps, functioning Circles and Cells, visible-win evidence, equity and participation findings, regenerative value reporting, a Learning Harvest, and a governed decision to continue, adapt, replicate or close.

Funder or sponsor outcome bundle

Transparent stewardship: visibility into who was served, which activities and evidence were authorized, what changed, what did not work, what risks remain and what conditions should precede further support.

16.3 Acceptance gate

- Dashboard values trace to metric passports and source evidence.
- Community and network maps enforce relationship consent and role access.
- Digital-twin and scenario outputs display assumptions and correction controls.
- Regenerative claims show evidence state and domain owner.
- Equity reporting applies threshold and small-cell suppression rules.
- Funder exports include negative findings and unresolved risks.
- Accessibility, security, performance, backup and recovery tests pass.
- Training, data dictionary, API documentation, deployment runbook, prompt / model registry and known-limitations register are delivered.
- WSS can operate the agreed pilot without vendor-only credentials or undocumented steps.

Part V - Payment, Access, Revenue, ROI, Metrics and Funder Readiness

17. Payment, Entitlement and Revenue Module

Revenue enablement belongs in the foundation because payment, sponsorship and institutional access are product behaviors, not an external spreadsheet. The payment gateway is only one component; the durable capability is an entitlement service that determines what access a verified user receives, why, for how long and under which plan or sponsor.

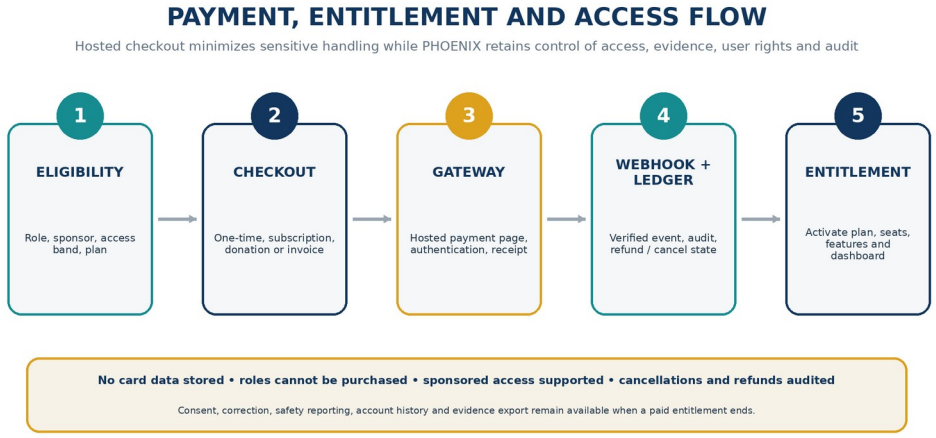

Figure 8. Payment and access flow: eligibility, hosted checkout, verified event processing and entitlement activation.

17.1 Mandatory payment and entitlement requirements

ID	Requirement	Required functionality	Acceptance evidence
PAY-01	Provider adapter	Gateway-independent interface for checkout, customer, subscription, event and refund operations.	Provider can be replaced without rewriting access logic.
PAY-02	Product and plan catalogue	Products, prices, billing mode, currency, eligibility, tax category, entitlement and status.	Administrator publishes and retires a plan.
PAY-03	Eligibility service	Determine free, sponsored, standard, solidarity, team or institutional access.	Rule explanation is visible and auditable.
PAY-04	Hosted checkout	Redirect to provider-hosted checkout so card data is not stored by PHOENIX.	Successful and cancelled checkout paths work.
PAY-05	One-time payment	Courses, events, assessments, cohorts, training and pilots.	Verified payment activates bounded access.
PAY-06	Recurring subscription	Monthly or annual access, renewal, plan change and cancellation.	Subscription lifecycle updates entitlements correctly.
PAY-07	Donations and sponsorships	One-time or recurring mission support with optional approved designation.	Donation does not purchase privileged authority or data access.
PAY-08	Institutional invoice access	Contract or invoice record may activate organization entitlements after authorized approval.	Access has approver, term and scope.
PAY-09	Sponsored-seat pools	Sponsor purchases or allocates a seat pool with eligibility and expiry.	Sponsored user receives equal privacy and service protections.
PAY-10	Verified events	Signature validation, duplicate protection, retry, failure queue and replay.	Duplicate event does not duplicate access or financial record.
PAY-11	Entitlement service	Translate verified payment, sponsor or contract state into plan, feature, seat and dataset access.	Entitlement is deterministic and explainable.
PAY-12	Billing portal	Customer can view plan, payment method, renewal, invoices and cancellation controls.	User can manage the subscription without support intervention.

ID	Requirement	Required functionality	Acceptance evidence
PAY-13	Refund and cancellation	Authorized request, provider action, entitlement adjustment and audit.	Refund / cancellation test follows approved policy.
PAY-14	Coupons and solidarity rules	Approved promotions, supported access and voluntary solidarity contribution.	Discount cannot alter governance rights.
PAY-15	Revenue dashboard	Transactions, active plans, recurring revenue, sponsored access, refunds, disputes and allocation.	Authorized dashboard reconciles to provider export.
PAY-16	Finance export	Authorized CSV, PDF or structured export for reconciliation and reporting.	Export excludes restricted personal fields.
PAY-17	Sandbox and failure tests	Success, failure, cancellation, dispute, duplicate event, expired method and sponsor allocation tests.	Test evidence is delivered before release.

17.2 Entitlement states

State	Meaning	Access behavior
Free	Approved no-fee access to defined capabilities.	Core rights remain available within plan limits.
Sponsored	Access funded by an institution, donor, employer or programme.	Same dignity, privacy and safety as self-funded access.
Active	Current one-time or recurring entitlement.	Features available according to plan and role.
Grace	Renewal problem within an approved grace period.	User retains limited continuity and receives clear notice.
Paused	Temporarily suspended by user or approved administrator action.	No hidden deletion; restoration path is visible.
Cancelled	Future renewal stopped.	Access continues through the agreed term unless policy states otherwise.
Expired	Entitlement term ended.	Data rights, export, correction, safety and appeal remain available.
Revoked for cause	Access removed through an authorized safety or agreement process.	Reason, authority, appeal and record retention are explicit.

17.3 Financial and access data objects

- PaymentProduct
- PaymentPlan
- PlanEligibilityRule
- CustomerAccount
- CheckoutSession
- PaymentTransaction
- Subscription
- BillingCycle
- Donation
- Sponsorship
- SponsoredSeatPool
- SeatAllocation
- InstitutionalContractEntitlement
- Coupon / AccessAdjustment
- Entitlement
- EntitlementGrant
- InvoiceReference
- Refund
- Dispute
- PaymentProviderEvent
- ReconciliationRun
- FundDesignation
- RevenueAllocationRule
- FinanceExport

17.4 Required payment interfaces

Interface	Purpose	Key controls
POST /checkout-sessions	Create hosted checkout for eligible product.	Authenticated user, product state, idempotency key.
POST /payment-events/{provider}	Receive signed provider events.	Signature verification, replay protection, event log.
GET /entitlements/me	Return active user access and explanation.	Role, tenant, plan, sponsor and expiry filters.
POST /sponsor-pools	Create approved sponsored-seat pool.	Sponsor authority, eligibility, capacity and term.
POST /seat-allocations	Allocate or revoke a sponsored seat.	Programme scope, user notice and audit.
POST /billing-portal	Create secure customer-portal session.	Customer ownership and short-lived link.
POST /refund-requests	Submit a governed refund request.	Policy, approver, reason and evidence.
GET /revenue-dashboard	Return authorized aggregate financial signals.	Finance / programme role and data minimization.
POST /finance-exports	Produce approved reconciliation or funder export.	Release scope, field selection and audit.

18. Pricing, Access and Ability-to-Pay Model

The platform should support differentiated access without treating payment as proof of trust, competence or worth.

18.1 Four access bands

Access band	Intended payer	Product behavior	Guardrail
Sponsored	Institution, donor, employer, grant or partner funds access.	Seat or cohort entitlement assigned to eligible user.	Sponsor does not receive hidden access to personal records.
Community-supported	Reduced access level based on approved programme rules.	Eligibility rule, application or code activates plan.	Avoid humiliating or intrusive proof requirements.
Standard	Published reference plan for the user type.	Self-service checkout and billing portal.	Transparent terms and cancellation.
Solidarity	User voluntarily contributes above the standard plan.	Extra contribution is recorded separately from entitlement.	No extra governance, matching or visibility privilege.

18.2 Plan categories by user type

User / payer	Suitable access model	Outcome being purchased
Student or early-career learner	Sponsored, community-supported or individual subscription.	Direction, learning pathway, Rope Team, project access and evidence.
Individual learner / practitioner	Monthly or annual subscription.	Continuing dashboard, learning, connections, projects and profile evolution.
Mentor / facilitator	Professional plan or programme seat.	Circle management, review tools, participant pathways and evidence workflow.
Seva participant	Sponsored, donation-supported, community-supported or individual access.	Circle participation, service pathway, opportunity and evidence of contribution.
Woman leader / participant	Programme seat, subscription or sponsored access.	Leadership pathway, mentorship, action and evidence.
NGO or community organization	Team plan, programme package or sponsored cohort.	Needs / offers mapping, Circles, projects, partner coordination and reporting.
University	Institutional subscription, readiness engagement or pilot package.	Learner and stakeholder activation, pathways, projects, dashboards and evidence.
Employer / corporation	Sponsored cohort, programme or institutional plan.	Capability development, talent pathways, practical projects and CSR / ESG evidence.
Funder / foundation	Sponsored-seat pool or programme sponsorship.	Transparent allocation, reach, evidence, risk and continuation gates.
Public agency	Institutional access or bounded pilot.	Stakeholder coordination, place-based projects, resource mapping and public-safe evidence.

18.3 One-time offers

- introductory course or workshop;
- facilitated cohort;
- leadership or facilitator programme;
- readiness assessment;
- organization or community profile workshop;
- systems and stakeholder mapping engagement;
- visible-win design sprint;
- institutional configuration;
- bounded university or community pilot;
- evidence and Learning Harvest package;
- implementation training; and
- replication or adoption package.

18.4 Pricing rules the product must support

- plan effective dates and version history;
- multiple currencies where the provider and legal review permit;
- recurring and one-time modes;
- seat quantities and organization tiers;
- supported and sponsored eligibility;
- coupon and programme codes;
- trial or preview access where approved;
- plan upgrades, downgrades and cancellation;
- tax category and invoice references;
- refund policy and grace state;
- feature and dataset entitlements;
- regional or institutional configuration; and
- clear separation of payment, donation and sponsorship purposes.

19. Revenue Portfolio and External Funding Architecture

The revenue portfolio should combine earned revenue, sponsored access and external support. No single stream should control governance, community voice or platform direction.

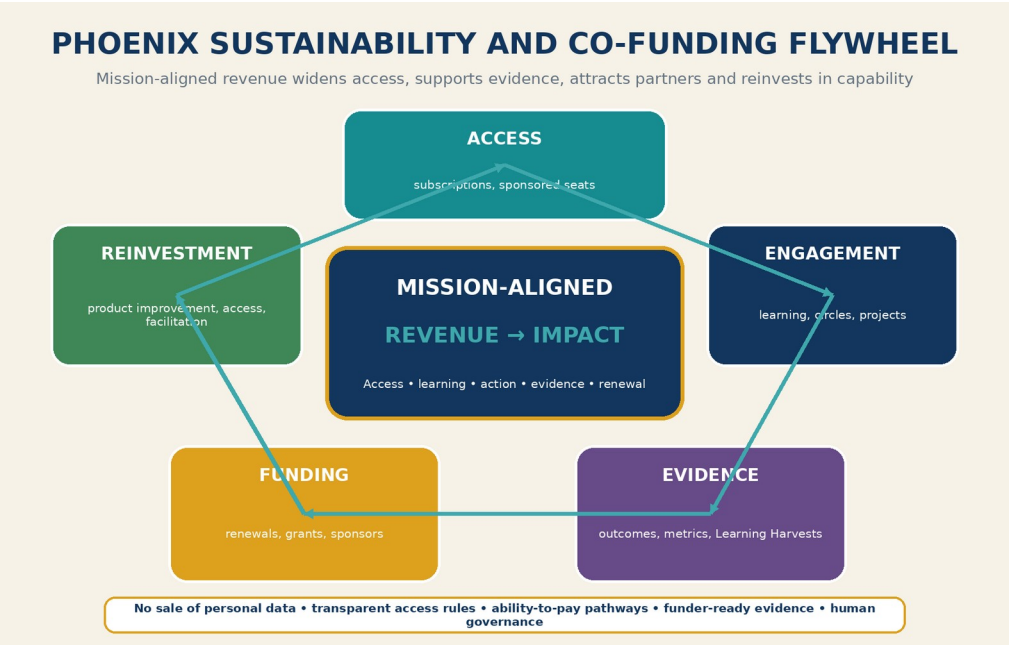

Figure 9. Sustainability and co-funding flywheel: access enables engagement, engagement produces evidence, evidence attracts support and support is reinvested in capability and access.

19.1 Revenue stream register

Stream	Primary payer	Platform / service deliverable	Evidence of viability
Individual subscriptions	Learners, practitioners, mentors.	Continuing access, pathways, connections, projects and portfolio.	Activation, retention, completion and support demand.
Team and NGO plans	Small organizations and community groups.	Seats, Circles, Action Rooms, partner mapping and reporting.	Seat utilization, project activation and renewal intent.
Institutional subscriptions	Universities, enterprises, public bodies.	Administration, configured use case, dashboards and reporting.	Active cohorts, outcomes and continuation decision.
One-time courses and events	Individuals or sponsoring institutions.	Bounded learning or convening outcome.	Registration, completion, application and satisfaction.
Cohort programmes	Universities, NGOs, employers, foundations.	Facilitated pathway, mentor network, project and harvest.	Cohort completion, evidence and partner value.
Facilitator and steward training	Individuals or institutions.	Training, practice, assessment and operating materials.	Facilitator readiness and successful Circle delivery.
Readiness and mapping engagements	Institutions and communities.	Stakeholder, needs / assets, risk and opportunity maps.	Decision-ready output and next-step conversion.
Bounded pilots	Universities, communities and sector partners.	Configured platform, Circles, Action Rooms, evidence and harvest.	Visible wins, evidence coverage and continuation gate.
Sponsored seats	Donors, employers, foundations and public programmes.	Transparent access pool and utilization reporting.	Seats activated, outcomes and unused balance.
Donations and recurring supporters	Individuals and mission-aligned supporters.	General or approved designated support.	Donor retention and transparent stewardship.
Corporate CSR / ESG programmes	Corporations and industry partners.	Sponsored learning, community projects and approved impact evidence.	Participation, project evidence and partner learning.
Grants and foundation support	Foundations and public programmes.	Research, access, pilot, inclusion or regeneration deliverables.	Milestones, evidence and reporting compliance.
Research and evaluation	Universities, foundations and public agencies.	Approved study, dataset, evaluation or methodology service.	Research outputs and ethical compliance.
Curriculum and content licensing	Institutions and learning partners.	Rights-cleared programme materials and configuration.	Authorized use, learner outcomes and renewal.
Implementation and advisory services	Institutions, communities and partners.	Configuration, facilitation, integration and change support.	Delivery milestones and client outcomes.
Future white-label / API access	Authorized ecosystem partners.	Configurable platform or approved service interfaces.	Technical adoption and governance compliance.

19.2 Funding-readiness functions

The platform should support:

1. creation of a funding, sponsorship or resource opportunity;
2. mission, use-case and restriction mapping;
3. responsible owner and approval state;
4. approved fund designation;
5. links among resources, seats, programmes, Action Rooms and evidence;
6. partner contribution records, including in-kind support;
7. outcome, expenditure and negative-finding evidence;
8. Learning Harvest and funder export;
9. continuation, condition or hold decision; and
10. public-safe reporting separated from restricted financial and participant records.

19.3 Sustainability principle

Revenue should fund access, product integrity, facilitation, evidence, support and continued development. It must not create hidden influence, pay-to-win matching, data sale, algorithmic favoritism or pressure to maximize screen time.

20. ROI and Value Realization by Partner

ROI in PHOENIX should be treated as a portfolio of financial, operational, educational, social, ecological and capability value. Each claim must show its evidence state and attribution limits.

20.1 Core formulas

Measure	Formula	Interpretation
Attributable financial ROI	(Attributable financial benefit - resources invested) / resources invested	Use only where the partner agrees attribution and accounting treatment.
Benefit-to-resource ratio	Total valued benefit / resources invested	May include monetized outcomes only when method is disclosed.
Contribution margin	(Recognized revenue - directly attributable delivery expenditure) / recognized revenue	Supports offer and delivery learning; not a mission score.
Customer acquisition ratio	Acquisition expenditure / new paying customer or institution	Used to improve outreach efficiency.
Lifetime value ratio	Expected contribution over relationship / acquisition expenditure	Planning indicator subject to observed retention.
Resource leverage	External cash and approved in-kind resources mobilized / WSS resources applied	Shows ability to attract complementary support.
Access leverage	Sponsored or supported participants / sponsor resource unit	Shows how support translates into access.
Learning-to-action conversion	Participants entering relevant action / pathway completers	Demonstrates applied learning.
Match-to-action conversion	Accepted matches leading to action / accepted matches	Tests collaboration usefulness.
Evidence coverage	Completed milestones with adequate evidence / completed milestones	Tests claim quality.
Continuation value	Partners choosing continue, adapt or replicate / completed pilots	Indicates practical relevance without assuming success.

20.2 Value by partner class

Partner	Expected value	Primary measures	Attribution caution
WSS / PHOENIX	Reusable kernel, validated use cases, mission revenue, learning and partner readiness.	Active cohorts, reusable modules, revenue mix, evidence quality, continuation.	Separate prototype contribution from partner delivery.
Shaligram	Clear product scope, demonstrable architecture, reusable components, reference-quality delivery and support learning.	Acceptance pass rate, defect trend, release predictability, reuse and client satisfaction.	Commercial claims require separate agreement and permission.
University	Engagement, learner support, new programme intelligence, applied projects and institutional evidence.	Activation, pathway demand, persistence, project evidence, continuation and approved enrollment contribution.	Do not claim admissions or retention impact without institutional data.
Learner	Direction, capability, relationships, opportunity, action and portable evidence.	Milestones, pathway completion, connections, project contribution and portfolio.	No guaranteed employment or credential outcome.
Faculty / facilitator	Better learner context, structured cohorts, review tools and reduced loss of meeting knowledge.	Review time, Circle continuity, commitments, evidence quality and satisfaction.	Efficiency claims require baseline comparison.
NGO / community	Visibility of needs and assets, partner coordination, project support and evidence.	Opportunities, resource matches, visible wins, community benefit and trust.	Community validates benefit and unintended effects.
Women's empowerment partner	Leadership pathways, mentorship, access, projects and barrier visibility.	Mentor activation, leadership milestones, opportunity access, project evidence and repair.	Avoid individual leadership scoring.
Seva partner	Intention-to-service pathway, trusted Circles and verified acts of care.	Continuity, service pledges, verified acts, community benefit and safety.	Service, not screen time, is the primary value.
Corporation / employer	Capability pathways, practical projects, talent relationships and CSR / ESG evidence.	Sponsored participation, skills evidence, project outcomes and partner learning.	No hidden recruiting access or personal-data transfer.
Funder / foundation	Transparent allocation, inclusion, evidence, risk and next-stage decisions.	Reach, supported access, evidence grade, resource leverage, negative findings and	Funding does not create governance control beyond agreement.

Partner	Expected value	Primary measures	Attribution caution
		continuation gate.	
Local authority	Stakeholder coordination, place-based priorities, implementation learning and public-safe evidence.	Participation, project progress, resource alignment and community validation.	Statutory decisions remain with authorized bodies.
Content / knowledge partner	Responsible use, attribution, learner application and feedback.	Source use, pathway completion, rights compliance and learning evidence.	Rights and endorsement remain explicit.

20.3 Phase-wise ROI logic

Milestone	Value created	Earliest measurable return	Leading indicators	Lagging indicators
Milestone 1	Trusted activation, operational pilot, paid or sponsored access and first action.	Reduced onboarding friction, activated seats, completed first actions and reusable core services.	Onboarding completion, paid activation, sponsored utilization, time to first action.	Retention, action completion, evidence coverage.
Milestone 2	Personalized pathways, trusted matching, use-case differentiation and institutional demand insight.	Higher pathway relevance, match activation, applied learning and programme-design signals.	Pathway acceptance, review compliance, match consent, demand patterns.	Learning-to-action conversion, profile growth, programme continuation.
Milestone 3	Decision-ready evidence, institutional value, external funding readiness and replication.	Verified outcomes, partner continuation, funder confidence and reusable pilot patterns.	Evidence maturity, dashboard use, sponsor reporting, unresolved risk closure.	Renewal, replication, resource leverage and validated regenerative value.

21. Dashboards, Metrics and Funder Readiness

21.1 Dashboard families

Dashboard	Primary users	Mandatory widgets
Participant	Learner, practitioner, woman leader, Seva participant.	North Star, milestone, next actions, pathway, Circle / Rope Team, opportunities, projects, evidence, profile evolution and consent.
Facilitator	Faculty, mentor, Circle steward.	Membership, continuity, agenda, commitments, concerns, missing voices, harvest queue and escalation.
Organization / partner	Organization representative, NGO, employer.	Needs, offers, opportunities, Action Rooms, resources, risks, milestones and evidence.
Programme administrator	Programme lead and steward.	Users, roles, onboarding, use-case configuration, reviews, entitlements, access mix, incidents and releases.
Institutional	University or public body.	Cohort activation, learning demand, project portfolio, engagement, equity and authorized outcomes.
Revenue and access	Finance, programme and sponsor stewards.	Transactions, active plans, recurring revenue, sponsored pools, seat utilization, refunds, disputes and allocation.
Funder / sponsor	Authorized external observer.	Approved reach, access, outcomes, evidence grades, resource use, risk, negative findings and next gate.
CCI portfolio	Community and institutional decision stewards.	CCI stages, network map, action portfolio, evidence maturity, regenerative value and learning / repair.
Technical operations	Platform team.	Availability, errors, queue health, storage, backup, integrations, model usage, payment events and incidents.

21.2 Core metrics

ID	Metric	Definition
M01	Invitation acceptance	Accepted valid invitations divided by delivered valid invitations.
M02	Onboarding completion	Verified users completing required onboarding divided by activated accounts.
M03	Time to first meaningful action	Median time from first login to Circle, pathway, card or Action Room activation.

ID	Metric	Definition
M04	Profile confirmation	Material imported or AI-proposed claims explicitly confirmed or edited.
M05	Purpose pathway activation	Users saving a North Star and taking the first step.
M06	Circle continuity	Circles completing the intended session or review cycle.
M07	Rope Team continuity	Teams completing agreed check-ins and support cycle.
M08	Learning-to-action conversion	Pathway completers entering relevant action.
M09	Match activation	Human-approved Match Briefs leading to mutual conversation consent.
M10	Match-to-action conversion	Accepted connections leading to a Circle, task, project or documented next step.
M11	Commitment completion	Completed commitments divided by commitments due.
M12	Action-to-evidence coverage	Completed milestones with adequate evidence.
M13	Human-review compliance	Consequential AI outputs reviewed before release; target is complete compliance.
M14	Source coverage	Released AI outputs with required source lineage.
M15	Trust-integrity coverage	Consequential records carrying consent, authority, visibility, evidence and review metadata.
M16	Learning Harvest completion	Completed Circles or projects producing an approved harvest.
M17	Sponsored-seat utilization	Activated sponsored seats divided by allocated capacity.
M18	Paid activation	Verified paying users or organizations receiving intended entitlement.
M19	Retention / continuation	Users or partners continuing into the next agreed period or stage.
M20	Barrier resolution	Approved barriers resolved or meaningfully mitigated.
M21	Evidence maturity	Distribution of evidence grades across key outcomes.
M22	Regenerative portfolio coverage	Action Rooms reporting economic, ecological and social / capability dimensions.
M23	Incident and repair completion	Concerns reaching an approved resolution or documented closure.
M24	Resource leverage	External cash and approved in-kind resources mobilized relative to WSS resources applied.

21.3 Evidence grades

- **A - Independently verified:** reviewed by an appropriately independent qualified party.
- **B - Partner or authorized reviewer verified:** confirmed within the responsible project or institution.
- **C - Participant-reported with supporting context:** credible self-report with artifact or contextual support.
- **D - System-derived estimate:** generated from platform events or a disclosed estimation method.
- **U - Insufficient evidence:** evidence is missing, contradictory or not yet reviewable.

21.4 Governance gates

- **Pass:** sufficient evidence and controls to continue.
- **Conditional:** continue only with named corrective actions and review date.
- **Hold:** pause expansion or release until a material issue is resolved.

21.5 Regenerative Value Triad

Do not collapse all value into one score. Each Action Room should report adjacent dimensions:

Economic and livelihood

Jobs, internships, paid project hours, enterprise or revenue opportunities, training-to-work pathways, partner resources mobilized and avoidable expenditure where methodologically valid.

Ecological

Emissions reduced or avoided, land, water or habitat restored, waste avoided or reused, resilience improvements and project-specific ecological indicators.

Social and capability

Learning completed, leadership milestones, trust and repair, inclusion, service delivered, facilitation capacity, community agency and safe support routing.

21.6 Funder-ready export bundle

- programme purpose and release boundary;
- participant and partner roles at approved aggregation;
- access model and sponsored-seat utilization;
- activities, outputs and milestone state;
- metric passports and observations;
- evidence artifacts and grades;
- resource and partner contribution map;
- economic, ecological and social / capability outcomes;
- equity, missing-voice and barrier findings;
- risks, incidents, remedies and negative findings;
- Learning Harvest;
- continuation, condition or hold recommendation; and
- public-safe summary separated from restricted annexes.

Part VI - Technical, Data, Integration and Guardrail Architecture

22. Technical and Non-Functional Architecture

The technical design should be modular enough to expand, but simple enough to operate as a controlled POC. WSS should build only the elements on which trust, product differentiation and evidence integrity depend, and use mature managed services for commodity infrastructure where appropriate.

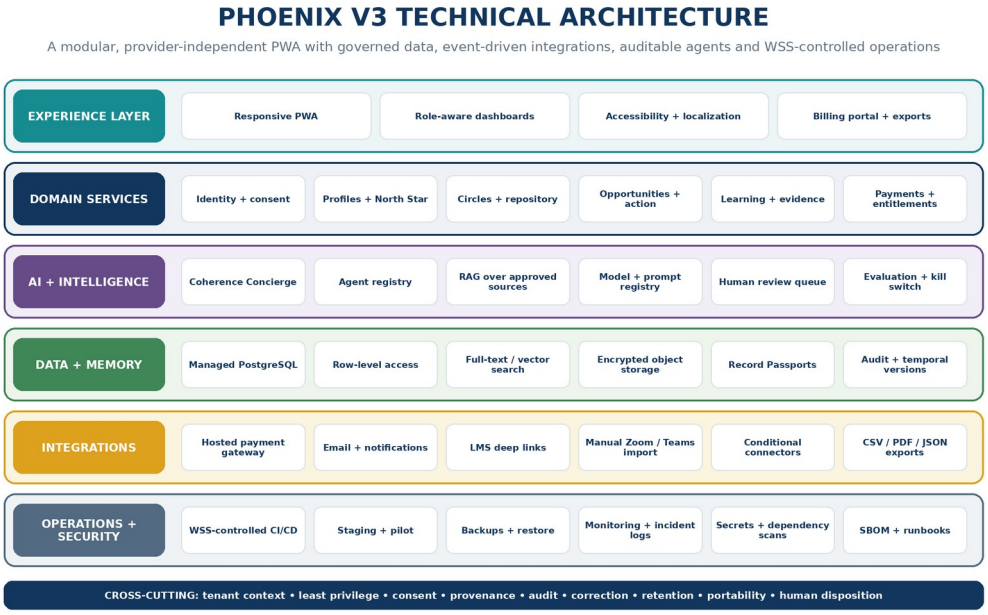

Figure 10. PHOENIX V3 technical architecture: experience, domain services, governed AI, data and memory, integrations, operations and security.

22.1 Recommended architecture stack

Layer	Recommended treatment	Rationale and boundary
Experience	Next.js / React / TypeScript Progressive Web App.	Responsive, accessible, phone-first and deployable without native-app maintenance.
Design system	Reusable components, tokens, forms, tables, dashboards and accessible interaction patterns.	Keeps three use-case packs visually coherent.
API and application	TypeScript domain services using a modular monolith or thin service boundaries for the POC.	Avoid premature microservice overhead while preserving clear domains.
Authentication	Managed identity service or approved open-standard provider supporting email verification, MFA readiness and role claims.	Institutional SSO remains conditional.
Authorization	Application policy layer with tenant, organization, role, purpose, record and field checks.	Authentication alone is insufficient.
Relational data	Managed PostgreSQL with row-level or equivalent access controls, migrations and backup.	System of record for identity, authority, workflow and audit metadata.
Search and retrieval	PostgreSQL full-text and vector extension or equivalent approved-content index.	Supports repository and rights-cleared knowledge retrieval.
Object storage	S3-compatible encrypted storage with signed URLs, malware scanning, lifecycle rules and backup.	Recordings and evidence should not live in the application database.
AI gateway	Provider-independent orchestration for approved models, retrieval, prompts, tools, rate limits and logging.	Prevents model-vendor lock-in and centralizes guardrails.
Payments	Provider adapter plus hosted checkout and portal.	Card information remains with the payment provider.
Notifications	Transactional email and in-app notification service; optional SMS only if separately approved.	Notifications inherit user preferences and project state.

Layer	Recommended treatment	Rationale and boundary
Analytics	Application-native dashboards over governed operational data; optional internal BI for administrators.	Avoid a second uncontrolled data warehouse during the POC.
Monitoring	Error tracking, structured logs, metrics, traces, queue health and synthetic availability checks.	Operational evidence is required for acceptance and support.
CI / CD	WSS-controlled Git repository, review workflow, automated tests, migration checks and environment promotion.	Code and deployment history remain portable and auditable.
Environments	Local / development, staging and pilot; production architecture prepared but not implied.	Separate configuration, secrets and test data.

22.2 Architecture principles

- one common kernel with configurable use-case packs;
- API-first domain boundaries;
- event-driven integration where lifecycle changes matter;
- least privilege and deny by default;
- tenant identifier on all core records;
- immutable history for consequential state changes;
- user-visible provenance and correction;
- human review as a service, not scattered UI logic;
- provider-independent AI and payment adapters;
- secure hosted checkout rather than card storage;
- repository metadata in relational data and binary content in object storage;
- structured exports and documented portability;
- no graph database, blockchain or separate data lake unless a demonstrated need justifies it; and
- no autonomous external actions in the POC.

22.3 Non-functional requirements

NFR	Required target or behavior	Acceptance approach
Accessibility	Priority flows designed and tested toward WCAG 2.2 AA expectations.	Automated checks plus keyboard and screen-reader review of agreed flows.
Responsive usability	Core flows function at agreed phone, tablet and desktop widths.	Device and browser test matrix.
Performance	Common authenticated views should load within agreed thresholds under pilot load.	Baseline and concurrent-user tests with documented environment.
Availability	Monitoring, status checks and incident response for the pilot operating window.	Synthetic checks and incident drill.
Security	Secure coding review, dependency scanning, secret management, transport encryption and least privilege.	Security checklist and penetration or targeted verification as agreed.
Privacy	Data minimization, purpose limitation, visibility controls, deletion and export.	Privacy test cases and Record Passport inspection.
Reliability	Idempotent payment events, resilient job queues and retry / dead-letter handling.	Failure injection and replay tests.
Auditability	Consequential create, edit, approve, release, export, entitlement and delete events are attributable.	Audit sampling and event trace.
Backup and recovery	Automated database and object backups with demonstrated restore.	Restore test to isolated environment.
Portability	Source, schema, configuration, prompts and exports are documented and WSS-controlled.	Handover checklist and clean-environment deployment.
Maintainability	Typed code, linting, automated tests, migration discipline and architecture decision records.	Repository review and quality gates.
Localization readiness	Externalized text, locale-aware date / number handling and content-language metadata.	Pseudo-localization or second-locale smoke test.
Observability	Correlation identifiers across UI, API, jobs, AI, payment and	Trace one end-to-end scenario.

NFR	Required target or behavior	Acceptance approach
	integration events.	
Data residency readiness	Service locations and transfer dependencies disclosed.	Architecture register and vendor configuration review.
Scalability	Stateless web tier and horizontally scalable queues / storage within service limits.	Load profile and bottleneck report.

22.4 Environment and secret controls

- separate credentials and service projects by environment;
- no production data in development;
- managed secret store;
- least-privilege service identities;
- key rotation procedure;
- WSS access to all administrative accounts;
- documented configuration variables;
- infrastructure configuration under source control where practical; and
- removal of departing team access within a defined offboarding process.

23. Data, Semantics, Memory and Record Passports

23.1 Core data domains

Domain	Principal entities
Tenant and organization	Tenant, Organization, Programme, UseCaseConfiguration, Place.
Identity and authority	Person, Account, Invitation, Membership, RoleDefinition, RoleAssignment, RoleAuthorization, RelationshipClaim.
Consent and trust	ParticipantAgreement, ConsentReceipt, VisibilityPolicy, PermissionGrant, CorrectionEvent, RevocationEvent, ReleaseState, RetentionRule, AuditEvent.
Profile and purpose	ProfileVersion, ProfileClaim, ClaimSource, Preference, Goal, Milestone, Hurdle, PurposeCompass, NorthStar, AIProfileCandidate.
Warm data and context	WarmDataRecord, ContextTag, RelationshipContext, PlaceContext, SensitivityClass, AggregationRule.
Circles and Rope Teams	Circle, RopeTeam, Membership, Agreement, Session, AgendaItem, Reflection, Commitment, Concern, Decision, LearningHarvest.
Needs and matching	NeedAssetOffer, OpportunityCard, OrganizationProfile, CandidateOrganization, MatchBrief, MatchDimension, StewardDecision, IntroductionConsent, MatchOutcome.
Action and change	ActionRoom, ActionMember, ChangeObject, Task, MilestoneRecord, Risk, Dependency, ResourceCommitment, VisibleWin.
Learning	ContentSource, SourceApproval, LearningAtom, PathwayTemplate, LearningPathway, PathwayStep, ReviewDecision, Completion, CompetencyEvidence.
Repository	CommunicationContainer, RepositoryItem, RecordingConsent, TranscriptVersion, RepositoryLink, RetentionAction, StorageQuota, RepositoryAudit.
Evidence and metrics	EvidenceArtifact, EvidenceReview, MetricDefinition, MetricPassport, MetricObservation, EvidenceGrade, GovernanceGate, DashboardSignal.
AI and agents	AIProvider, ModelRegistry, PromptRegistry, AgentRegistry, AgentCard, Delegation, AIJob, GeneratedOutput, ReviewDecision, ApprovedOutput, AIIncident.
Payments and access	PaymentProduct, PaymentPlan, CustomerAccount, PaymentTransaction, Subscription, Sponsorship, SponsoredSeatPool, SeatAllocation, Entitlement, Refund, Dispute, ProviderEvent.
Governance and safety	PilotCharter, Policy, GovernanceCase, Incident, Appeal, Remedy, PublicReleaseDecision, LegalHold.

23.2 Universal Record Passport

Every consequential record should carry or inherit:

- record identifier and version;
- tenant, organization, programme and use-case context;

- purpose;
- owner and accountable human role;
- source and provenance;
- applicable authority and delegation;
- consent or other approved basis;
- data class and sensitivity;
- visibility and sharing scope;
- permitted and prohibited uses;
- evidence state;
- human-review state;
- AI model, prompt, tool and retrieval context where relevant;
- correction, contest and appeal route;
- retention, expiry and legal-hold state;
- release state;
- prior and successor version; and
- audit references.

A technical action being possible never establishes that it is authorized.

23.3 Semantic discipline

The product should maintain a controlled vocabulary for:

- role versus persona;
- need, asset, offer and opportunity;
- Circle, Rope Team, Coherence Cell and Island of Coherence;
- draft, reviewed, approved, released and revoked;
- source, evidence, observation, interpretation and claim;
- goal, milestone, task, commitment and outcome;
- authority, consent, permission and visibility;
- private, team, programme, tenant, partner and public release;
- user memory, shared memory and institutional memory; and
- economic, ecological and social / capability value.

Terms must appear consistently in the database, APIs, UI, training and exports. A glossary is included in Appendix H.

23.4 Temporal authority and versioning

Authority and truth can change. The system should therefore store effective dates, expiry, supersession and source for:

- roles and organization representation;
- consent and visibility;
- profile claims;
- agreements and policies;
- content approvals;
- agent and model versions;
- metric definitions;
- payment products and entitlements;
- resource commitments; and
- public-release decisions.

23.5 Memory layers

Memory layer	Content	Default owner	Use
Personal working memory	Private goals, reflections, preferences and draft notes.	User.	Concierge continuity and self-guidance.
Profile memory	Approved claims, milestones and evidence links.	User with applicable reviewers.	Profile evolution and pathways.

Memory layer	Content	Default owner	Use
Relationship memory	Consented roles, memberships, introductions and collaboration outcomes.	Relationship participants and responsible steward.	Trust and continuity.
Circle / project memory	Agreements, sessions, decisions, commitments, repository records and harvests.	Circle or project authority.	Follow-through and learning.
Institutional memory	Approved aggregate patterns, policies, programme outcomes and decisions.	Institution or programme.	Planning and governance.
Network learning memory	Released patterns, templates and inter-Island learning.	Releasing community and network steward.	Responsible replication.
Agent audit memory	Requests, sources, rules, outputs, review and incidents.	WSS trust / technical steward.	Evaluation, correction and accountability.

23.6 Data classes

Class	Examples	Handling
Public-approved	Released programme description or approved Learning Harvest.	Readable within release terms.
Internal	General programme operations and non-sensitive project records.	Authenticated, role-limited.
Confidential	Profile details, organization strategy, private Circle records.	Purpose-bound, encrypted and access-logged.
Sensitive	Identity category, safeguarding, wellbeing, conflict or vulnerable context.	Minimized, field-restricted and separately reviewed.
Restricted evidence	Research, legal, financial, donor or rights-controlled material.	Named authorization, export controls and retention.
Safety / incident	Concern, appeal, referral, remedy and investigation.	Segregated access and no general analytics.

24. Domain Services, APIs, Events and Integrations

24.1 Domain service map

Service	Responsibilities	Key dependencies
Identity and Access Service	Invitations, authentication linkage, memberships, roles, authority and sessions.	Identity provider, audit.
Consent and Trust Service	Agreements, consents, visibility, Record Passports, release and policy checks.	Identity, policy engine, audit.
Profile and Purpose Service	Profile versions, claims, Purpose Compass, North Star and profile candidates.	Consent, evidence, AI gateway.
Collaboration Service	Circles, Rope Teams, sessions, commitments, concerns and messages.	Repository, notifications, review.
Opportunity and Synergy Service	Needs, offers, organizations, candidates, Match Briefs and introductions.	Profile, consent, AI, search.
Action and Change Service	Action Rooms, Change Objects, tasks, decisions, risks, resources and visible wins.	Collaboration, evidence, metrics.
Learning Service	Sources, atoms, pathways, review, completion and competency evidence.	AI gateway, content storage, profile.
Repository Service	Upload, metadata, search, link, version, retention, quota, export and audit.	Object storage, search, AI jobs.
Evidence and Metrics Service	Evidence, reviews, metric passports, observations, grades, gates and dashboards.	Action, learning, repository.
Agent and AI Service	Agent registry, routing, retrieval, prompts, models, jobs, review and incidents.	Trust policy, search, all requesting domains.
Payment and Entitlement Service	Products, checkout, events, subscriptions, sponsorships, seats and	Payment provider, identity, finance export.

Service	Responsibilities	Key dependencies
	access.	
Governance and Safety Service	Policies, cases, incidents, appeals, remedies and public-release decisions.	Identity, trust, audit, notifications.
Notification Service	In-app and email notifications, preferences, templates and delivery state.	All domain events.
Reporting and Export Service	Authorized PDF, CSV and structured exports with release controls.	Metrics, finance, repository, audit.

24.2 Integration matrix

Integration	Initial treatment	Later or conditional treatment	Controls
LMS	Secure outbound and inbound deep links with course or resource context.	LTI 1.3, roster and grade services after institutional discovery.	Signed state, minimal context, institution approval.
Zoom	Meeting link plus manual authorized recording / transcript import.	Direct recording, transcript and chat connector.	Organizer authority, consent, retention, duplicate handling.
Microsoft Teams	Meeting link plus manual authorized export import.	Graph-based connector where tenant approval permits.	Tenant admin approval, scopes, retention and deletion propagation.
Email	Transactional invitations, verification, reminders and receipts.	Inbound reply or group-mail capture only if specifically designed.	Template approval, preference and delivery audit.
Payment provider	Hosted checkout, portal and verified webhooks.	Additional provider through adapter.	No card storage, event signature and idempotency.
Cloud object storage	Encrypted evidence and repository content.	Regional storage configuration or archival tier.	Signed access, lifecycle, backup and quota.
AI model providers	Approved text models through WSS gateway.	Additional providers or self-hosted models after evaluation.	Model registry, prompt registry, source rules and usage limits.
Organization data sources	Manual links and approved public-source retrieval.	Curated data partner or registry connectors.	Source terms, date, attribution and no unauthorized scraping.
Analytics / BI	Application dashboards.	Approved internal BI connection.	Aggregation, field suppression and release state.
Identity provider	Managed email-based identity.	Institutional OIDC / SAML SSO.	Role mapping, deprovisioning and tenant discovery.

24.3 Event catalogue

Event	Producer	Consumers	Key payload
invitation.accepted	Identity	Profile, metrics, notifications.	Tenant, person, inviter, context, role request.
consent.changed	Trust	Profile, AI, repository, reporting.	Purpose, old state, new state, effective time.
profile.version.approved	Profile	Concierge, matching, metrics.	Person, version, changed claims, evidence.
circle.session.completed	Collaboration	Repository, AI, metrics.	Circle, session, participants, source links.
harvest.reviewed	AI / Review	Collaboration, action, reporting.	Output, reviewer, decisions, release.
opportunity.published	Synergy	Search, matching, notifications.	Owner, type, visibility, expiry.
match.approved	Synergy	Notifications, metrics.	Parties, rationale, steward, consent state.
introduction.consented	Synergy	Collaboration, notifications.	Parties, scope, first step.
action.milestone.completed	Action	Evidence, metrics, profile.	Project, milestone, owner, evidence state.
evidence.reviewed	Evidence	Action, profile, reporting.	Artifact, grade, reviewer, comments.
payment.event.verified	Payment	Entitlement, finance, audit.	Provider event, customer,

Event	Producer	Consumers	Key payload
			transaction, state.
entitlement.changed	Payment	UI, learning, collaboration, metrics.	User / organization, plan, old / new state, reason.
repository.item.deleted	Repository	Search, AI, audit.	Item, authority, deletion mode, related records.
agent.incident.opened	AI	Governance, operations, trust.	Agent, request, impact, severity, containment.
public.release.approved	Governance	Reporting, repository, communications.	Record, release scope, approver, expiry.

24.4 API control requirements

- OpenAPI or equivalent documentation for application interfaces.
- Versioned endpoints and backward-compatible change policy during the pilot.
- Authenticated requests with tenant and role context.
- Field-level authorization where sensitive data is present.
- Idempotency for create actions affected by retry.
- Correlation identifiers across domain, AI, payment and integration calls.
- Rate limits and abuse protection.
- Validation and structured error responses.
- No secrets, personal data or raw recordings in logs.
- Audit events for consequential reads, writes, exports and deletions.
- Signed and time-limited file access.
- Export and deletion jobs designed for retry and traceability.
- Test fixtures that do not contain real participant data.

25. Trust, Payment, Financial, AI and Mission Guardrails

25.1 Human and community guardrails

1. No user may purchase trust, authority, governance standing, spiritual status, research privilege or favorable matching.
2. Core safety, consent, correction, appeal and export rights do not disappear when a subscription ends.
3. Community benefit and harm are interpreted with the affected community, not only by WSS or a sponsor.
4. Warm data remains contextual and cannot be reduced to a universal score.
5. Under-represented participants must not be used as a marketing asset without explicit release authority.
6. Declining a match, recommendation or public output must not create a hidden penalty.
7. Local and institutional decision rights remain with their legitimate authorities.

25.2 Payment and access guardrails

- Card details are handled by the hosted payment provider, not stored by PHOENIX.
- Payment events are verified, idempotent and auditable.
- Terms, renewal, cancellation, refund and sponsor conditions are visible before checkout.
- Donations are clearly distinguished from purchases and sponsorships.
- Sponsored access provides equal privacy and dignity.
- Plan level may control services and capacity, not human worth or governance power.
- Hidden fees, preselected donations and manipulative scarcity are prohibited.
- Entitlement removal must not destroy the user's lawful data rights.
- Payment and financial exports are restricted to authorized roles.
- Marketplace payouts, escrow and grant disbursement remain excluded.

25.3 Finance, tax and nonprofit guardrails

- The system records payment, donation, sponsorship and contract access as distinct transaction purposes.
- Tax, charitable receipt, revenue recognition and restricted-fund treatment require qualified review and configured policy.

- The POC must not generate legal or tax statements that have not been approved.
- Fund designations and restrictions must remain linked to the applicable programme and evidence.
- Financial dashboards must reconcile to the provider or approved accounting export.
- Participant data must not be included in a finance export unless necessary and authorized.

25.4 AI prohibitions

The POC must not:

- act externally without explicit authorized approval;
- edit profiles silently;
- introduce people automatically;
- publish consequential content automatically;
- grade, accredit or credential users;
- make admissions, employment, pay, promotion, funding, moderation or sanction decisions;
- provide clinical, legal, spiritual or psychological diagnosis;
- infer sensitive traits from behavior;
- perform emotion recognition or biometric analysis;
- rank human worth, spirituality, leadership potential or community legitimacy;
- train a general model on participant content without separate authorization;
- hide the fact that the user is interacting with AI; or
- erase contradictory evidence, uncertainty or negative findings.

25.5 Regeneration and sustainability guardrails

- Doughnut and regenerative logic are decision lenses, not certification.
- Ecological claims require a responsible domain owner and disclosed evidence.
- Social benefit cannot be assumed from participation counts alone.
- Economic value must not externalize harm to people or nature.
- The platform should measure service and applied value rather than screen time.
- Scale requires local adaptation, authority and a Learning Harvest.

Part VII - Delivery Governance, Acceptance, Ownership, Risk and Decisions

26. Delivery Governance, Acceptance, Ownership, Support and Handover

26.1 Delivery roles

Role	Primary responsibility	Decision right
WSS Product Owner	Product priority, scope, use cases and final acceptance.	Accepts deliverables and scope changes.
WSS Trust / Data Steward	Consent, authority, data classes, release, retention and AI controls.	Approves trust-critical behavior and data policy.
WSS Use-Case Leads	Education, Seva and Women's Empowerment configuration and acceptance.	Approve domain templates, sources and metrics.
WSS Programme / Revenue Steward	Plans, sponsored access, offers, reporting and partner outcomes.	Approves product and entitlement configuration.
Shaligram Delivery Lead	Delivery plan, team coordination, dependencies, demonstrations and issue resolution.	Commits vendor resources and delivery actions.
Shaligram Technical Lead	Architecture, code quality, integrations, security and operations.	Approves technical implementation within accepted architecture.
UX / Accessibility Lead	Journey design, component system, responsive and accessible experience.	Recommends and verifies experience acceptance.
AI / Data Lead	Agent gateway, retrieval, model and prompt registry, evaluation and data workflows.	Implements only authorized agents and data use.
QA Lead	Test strategy, automation, regression, evidence and defect management.	Certifies release readiness against agreed test plan.
Institutional / Community Reviewer	Local authority, workflow fit, language, safety and use-case validation.	Approves only the applicable local or institutional elements.

26.2 Delivery artifacts

Shaligram should maintain and deliver:

- product backlog and acceptance criteria;
- UX journey maps and clickable prototypes;
- architecture and data diagrams;
- architecture decision records;
- source repository and branching policy;
- environment and deployment documentation;
- database schema and migration history;
- API documentation;
- Agent Cards, prompt registry and model registry;
- threat model and security checklist;
- accessibility test evidence;
- automated and manual test results;
- repository retention and storage configuration;
- payment and entitlement test evidence;
- defect and known-limitations register;
- release notes;
- data dictionary and glossary;
- administrator and user guides;
- backup / restore runbook;
- support and incident runbook; and

- final handover package.

26.3 Acceptance-gated delivery

Gate	Evidence required	Approval
G0 - Scope and architecture	Approved backlog, journeys, schema, permissions, service map, integration boundaries, test plan and exclusions.	WSS Product Owner and Trust / Data Steward.
G1 - Milestone 1	Complete trusted participation, collaboration, evidence, repository baseline and payment / entitlement loop.	WSS Product Owner plus applicable use-case reviewers.
G2 - Milestone 2	Concierge, agents, purpose-to-regeneration, learning, organization discovery, matching and three use-case packs.	WSS Product Owner, Trust / Data Steward and use-case leads.
G3 - Milestone 3	CCI dashboards, evidence and funder outputs, hardening, operations, training and handover.	WSS Product Owner and named operational reviewers.
G4 - Stabilization	Agreed defect resolution, documentation completeness and operational transfer.	WSS Product Owner and Technical Steward.

No milestone is accepted by percentage-of-code completion. Acceptance is based on working behavior, test evidence, documentation and WSS operational control.

26.4 Scope change control

Every proposed change should state:

- reason and user / programme value;
- affected requirements and acceptance tests;
- effect on dependencies, security, data, accessibility and operations;
- what is added, removed, deferred or replaced;
- named approver; and
- updated backlog and release state.

No requested addition should silently displace a mandatory trust, repository, payment, evidence or handover requirement.

26.5 Ownership and operational control

WSS should retain or receive:

- source code and complete history;
- database schema and migrations;
- infrastructure and deployment configuration;
- prompts, Agent Cards, model and evaluation settings;
- design files and component library;
- technical and user documentation;
- content and configuration created for the project, subject to third-party rights;
- access to cloud, identity, storage, AI, email and payment accounts;
- export of data in documented formats;
- dependency and license register;
- credentials and administrative transfer procedure; and
- the right to use another qualified provider to maintain or extend the system.

Third-party and pre-existing vendor intellectual property must be disclosed and licensed clearly enough that WSS can operate the delivered system.

26.6 Support and warranty requirements

The Statement of Work should define:

- stabilization period after each major release;
- defect severity definitions;
- response and target-resolution windows;
- support hours and communication channel;

- security-incident escalation;
- payment, identity and data-loss incident treatment;
- service-provider outage responsibilities;
- dependency update policy;
- backup and restore responsibility;
- monitoring and alert ownership;
- usage and storage limit monitoring;
- documentation update obligations; and
- transition from included stabilization to any separately agreed maintenance service.

27. Risks, Constraints and Mitigations

Risk	Why it matters	Mitigation / acceptance condition
Scope overload	The wider PHOENIX vision can overwhelm a bounded POC.	Common kernel, explicit exclusions, milestone gates and change control.
Conceptual language obscures behavior	Terms such as coherence may remain abstract for engineering.	Every concept maps to a workflow, object, permission, event and acceptance test.
AI overreach	Agentic language may be interpreted as autonomous authority.	Authority classes, Agent Cards, human review, tool limits and prohibited actions.
Hidden profiling	Evolving personalization could become surveillance.	User-visible memory, claim states, consent, no sensitive inference and correction.
Poor source quality	AI output may rely on outdated or inappropriate material.	Approved source registry, dates, rights state, retrieval filters and human review.
Repository ambiguity	Recordings and chats create privacy, storage and support exposure.	Explicit baseline, connector boundaries, consent, quotas, retention and acceptance tests.
Integration dependency	LMS, Zoom, Teams, identity or payment access may be delayed by third parties.	Deep links and manual import baseline; conditional connectors; dependency register.
Payment-state mismatch	Provider and platform may disagree, incorrectly granting or removing access.	Verified events, idempotency, reconciliation, failure queue and entitlement audit.
Data isolation defect	Cross-tenant or cross-role exposure would undermine trust.	Tenant identifiers, policy tests, field controls and security review.
Accessibility debt	Phone-first does not automatically mean accessible.	Accessible component system and test evidence for priority flows.
Warm-data misuse	Context-rich data could expose or stigmatize people.	Private default, field visibility, thresholded aggregation and no ranking.
Community extraction	Institutional or sponsor goals may dominate local benefit.	Community authority, benefit evidence, negative findings and repair route.
Unsupported impact claims	Early results may be overstated.	Evidence grades, public-release approval and developmental-status language.
Revenue mission drift	Engagement or premium access could distort priorities.	No advertising, no pay-to-win, transparent access and portfolio metrics.
Operational lock-in	WSS could depend on vendor-only knowledge or credentials.	WSS-controlled accounts, documentation, clean deployment and handover gate.
Security and privacy incident	Recordings, profiles and relationships are sensitive.	Data minimization, encryption, least privilege, incident runbook and audit.
Model or provider change	AI behavior and availability can change.	Provider gateway, model registry, evaluations, pinned versions where possible and fallback.
Inadequate facilitation	Software cannot create trust by itself.	Facilitator roles, training, templates, escalation and Learning Harvest review.
Metric gaming	Teams may optimize numbers rather than outcomes.	Contextual metric passports, evidence grades and no single score.
Premature scaling	Replication before proof can spread weak practice.	Coherence before scale, visible wins, acceptance gates and local adaptation.

28. Clarifications Required from Shaligram

Shaligram should answer each item as **included**, **excluded**, **conditional**, or **requires discovery**, and cite the relevant Statement of Work deliverable and acceptance test.

1. What exact invitation expiry, resend, revocation and one-time-use behavior is proposed?
2. Which roles can request, approve, expire and revoke other roles?
3. How is cross-organization collaboration isolated and authorized?
4. Which authentication provider is proposed, and how will WSS retain administrative control?
5. What participant agreements and consent purposes are included in the initial build?
6. How are field-level visibility, consent withdrawal and historical audit implemented?
7. How are immutable profile versions and claim states represented?
8. Which Circle and Rope Team communication functions are included?
9. Are in-platform messages retained, editable, deletable and exportable, and under what rules?
10. Is the full Project Communications and Recordings Repository included?
11. Which recording, transcript, chat and file types are supported?
12. Are Zoom and Teams integrations manual import only or direct connectors?
13. What consent, participant notice and meeting-organizer controls apply to recordings?
14. What object-storage service, region, quota, lifecycle, backup and recovery are proposed?
15. Which repository search and AI-extraction capabilities are included?
16. Which payment provider and hosted-checkout pattern are proposed?
17. Which PAY-01 to PAY-17 requirements are included in each milestone?
18. How are payment events verified, deduplicated, retried and reconciled?
19. How are sponsored-seat pools and institutional entitlements represented?
20. What finance exports and billing portal functions are included?
21. Which Coherence Concierge agents are implemented in each milestone?
22. How are Agent Cards, authority classes, prompt versions, model versions and tools stored?
23. How can WSS disable an agent, model, prompt or integration immediately?
24. Which approved-source retrieval and citation behavior is included?
25. What human-review queues and release states are implemented?
26. How does the Values Policy Gate work and where are its rules administered?
27. Which organization data sources may be searched, and how is scraping prevented?
28. How is the ten-candidate organization suggestion generated and explained?
29. Which adaptive-learning functions and content-review workflows are included?
30. Which LMS deep-link fields are transmitted and how are they protected?
31. Is LTI discovery included, and which institutional dependencies remain outside Shaligram's control?
32. Which dashboards and metric definitions are included in each milestone?
33. How are evidence grades, governance gates and missing data displayed?
34. What equity thresholds and small-cell suppression are implemented?
35. Which accessibility tests and target flows are included?
36. What security testing, dependency scanning and incident response are included?
37. What backup, restore, monitoring and availability evidence will be delivered?
38. What source code, design files, schemas, prompts, documentation and account access will transfer to WSS?
39. Which third-party licenses, service limits and recurring operating dependencies apply?
40. What stabilization, support and defect-resolution commitments are included?

29. Recommended Working Sequence

Step	Joint action	Required output
1. Scope reconciliation	Review V3 traceability and mark each item included, excluded, conditional or discovery.	Signed scope matrix.
2. Journey and permission workshop	Walk through participant, facilitator, partner, administrator, sponsor and technical scenarios.	Journey maps, role matrix and consent model.

Step	Joint action	Required output
3. Architecture and data workshop	Confirm services, records, Record Passport, integrations, retention and environment model.	Architecture, schema and dependency register.
4. Repository and AI workshop	Confirm record classes, imports, agents, sources, review, memory and stop rules.	Repository specification, Agent Cards and evaluation plan.
5. Revenue and entitlement workshop	Confirm payer groups, products, sponsored access, states, webhooks and finance exports.	Product / entitlement catalogue and test plan.
6. Milestone backlog and prototypes	Translate requirements into stories, clickable flows and acceptance scenarios.	Approved backlog and UX prototype.
7. Revised Statement of Work	Shaligram returns deliverables, exclusions, dependencies, acceptance, ownership, support and handover.	Contract-ready Statement of Work.
8. Build and demonstrations	Deliver in small vertical slices with working demonstrations and test evidence.	Accepted milestone releases.
9. Pilot configuration	Load approved roles, sources, templates, use cases and access products.	Pilot-ready environment and training.
10. Learning and next-cycle decision	Review outcomes, incidents, evidence, user feedback and operational readiness.	Learning Harvest and continue / adapt / close decision.

Appendices

Appendix A. Consolidated Milestone Backlog

A.1 Milestone 1 backlog

ID	Capability	Priority	Acceptance anchor
M1-01	Responsive PWA and role-aware dashboard	Mandatory	Priority flows pass responsive and accessibility tests.
M1-02	Invitation-only identity	Mandatory	Verified invite, expiry, revocation and audit work.
M1-03	Role and organization authority	Mandatory	Permission matrix and separation tests pass.
M1-04	Agreements, consent and visibility	Mandatory	Purpose-specific consent changes behavior.
M1-05	Versioned profile and claims	Mandatory	Profile comparison and correction work.
M1-06	Lightweight Purpose Compass	Mandatory	User saves editable goal and first milestone.
M1-07	Collaboration Circles	Mandatory	Complete session, commitments and reflection cycle.
M1-08	Rope Teams	Important	Small-team check-in and support flow works.
M1-09	Needs, assets and offers	Mandatory	Publish, filter, expire and withdraw card.
M1-10	Action Rooms and Change Objects	Mandatory	Milestone, decision and evidence loop completes.
M1-11	Evidence Locker	Mandatory	Artifact review and export work.
M1-12	Repository baseline	Mandatory	Authorized upload, search, linkage, retention and audit work.
M1-13	Basic Concierge	Mandatory	Approved-source retrieval and clear AI disclosure.
M1-14	Payment and entitlement service	Mandatory	Hosted checkout, sponsorship and entitlement tests pass.
M1-15	Steward / admin console	Mandatory	Pilot can be operated without direct database changes.
M1-16	Starter metrics	Mandatory	Dashboard shows measured, provisional and missing states.

A.2 Milestone 2 backlog

ID	Capability	Priority	Acceptance anchor
M2-01	Agent registry and Agent Cards	Mandatory	Agents can be approved, versioned and disabled.
M2-02	Concierge orchestration	Mandatory	Request pipeline and policy checks are traceable.
M2-03	Values Policy Gate	Mandatory	Rule outcome and reviewer are recorded.
M2-04	Purpose-to-Regeneration North Star	Mandatory	Reviewed pathway includes context and evidence questions.
M2-05	Adaptive learning pathway	Mandatory	Source-linked pathway is reviewed and completed.

ID	Capability	Priority	Acceptance anchor
M2-06	Organization intake	Mandatory	Authorized organization profile is created and corrected.
M2-07	Candidate organization suggestions	Mandatory	Up to ten source-linked candidates are explainable.
M2-08	Collaboration nudges and Match Briefs	Mandatory	Steward review and mutual consent are enforced.
M2-09	AI Learning Harvest	Mandatory	Source-linked draft is edited and approved.
M2-10	Profile evolution candidates	Mandatory	User accepts, edits or rejects candidate.
M2-11	Education-demand intelligence	Important	Threshold-protected aggregate pattern is visible.
M2-12	Education pack	Mandatory	End-to-end learner scenario completes.
M2-13	Seva pack	Mandatory	Intention-to-service scenario completes.
M2-14	Women's Empowerment pack	Mandatory	Leadership-to-action scenario completes.

A.3 Milestone 3 backlog

ID	Capability	Priority	Acceptance anchor
M3-01	CCI dashboard	Mandatory	All CCI stages link to approved records and evidence.
M3-02	Network and relationship maps	Mandatory	Consent and relationship-state filters work.
M3-03	Bounded community digital twin	Important	Assumptions, corrections and disagreement are retained.
M3-04	Systems / scenario support	Important	Scenario sources and assumptions are explicit.
M3-05	Regenerative portfolio	Mandatory	Three value dimensions and evidence states are shown.
M3-06	Equity and engagement analytics	Mandatory	Threshold and suppression tests pass.
M3-07	Institutional and funder exports	Mandatory	Authorized export traces to source records.
M3-08	Replication and inter-Island learning	Important	Pattern reuse records local adaptation.
M3-09	Operational hardening	Mandatory	Security, accessibility, monitoring and recovery pass.
M3-10	Documentation, training and handover	Mandatory	WSS independently operates agreed workflows.
M3-11	Direct meeting connectors	Conditional	Connector-specific consent, retry and deletion tests pass.
M3-12	Advanced LMS integration	Conditional	Institutional discovery and authorization are complete.

Appendix B. V1 and V2 to V3 Traceability Matrix

B.1 Proposal v1.0 coverage

Earlier V1 section	V3 location	Treatment
Executive proposal	Sections 1 and 13	Product ask, operating loop, proof and boundaries retained and expanded.

Earlier V1 section	V3 location	Treatment
Product and impact proposition	Sections 1, 2 and 8	Problems, use cases and value proposition integrated with CCI.
Success definition and POC envelope	Section 13	End-to-end proof, boundaries and exclusions retained without project financial values.
Three-phase scope and delivery	Sections 14-16	Converted to acceptance-gated milestone feature, MVP and outcome maps.
Common platform kernel and use-case packs	Section 8	All shared modules retained and expanded to repository, agents and Rope Teams.
Personas, onboarding and evolving profiles	Sections 6 and 7	Role bundles, eight-stage onboarding, profile claims, warm data and equity expanded.
Payment, entitlement and revenue module	Section 17	PAY-01 to PAY-17, states, objects and interfaces retained.
Pricing, access and ability-to-pay	Section 18	Access bands, payer types, one-time offers and pricing rules retained without financial values.
Revenue portfolio and external funding	Section 19	Full revenue-stream and funder-readiness architecture retained.
ROI and partner value	Section 20	Formulas, partner metrics and milestone ROI logic retained and expanded.
Metrics, dashboards and funder readiness	Section 21	Dashboards, core metrics, evidence grades, gates and export bundle retained.
Technical architecture and data structure	Sections 22-24	Stack, services, data domains, Record Passport, APIs, events and integrations expanded.
Trust, payment and financial guardrails	Section 25	Human, payment, finance, AI and regeneration safeguards consolidated.
Delivery governance and acceptance	Section 26	Roles, gates, change control, ownership, support and handover retained.
Risks and mitigations	Section 27	Risk register expanded for agents, warm data and repository.
Decisions and next steps	Sections 28-29	Clarification register and working sequence expanded.
Earlier appendices	Appendices A, F and G	Feature backlog, metric dictionary and source boundaries retained in updated form.

B.2 Proposal v2.0 coverage

Earlier V2 section	V3 location	Treatment
Executive thesis and CCI	Sections 1-2	Core proposition and actionable intelligence loop retained.
Methods and model-community toolkit	Sections 3-4	Method register, stage architecture and visual guardrails retained and clarified.
Coherence Concierge and agents	Section 9	Specialist agents, authority classes, memory and request pipeline expanded technically.
Purpose-to-Regeneration North Star	Section 5	Ikigai-inspired, WSS axioms, Doughnut and education-demand logic retained.
Communications repository	Section 10	Minimum capability, record classes and connector boundary expanded.
Personas, warm data and Rope Teams	Sections 6-7	Integrated with full V1 roles and onboarding.
Common kernel and three packs	Section 8	Integrated with full V1 kernel and deferred-capability boundaries.
Milestones 1-3	Sections 14-16	Preserved and mapped to features, functions, MVPs, paid outcomes and gates.
Payment, revenue and access	Sections 17-19	Expanded with complete V1 payment and entitlement architecture.

Earlier V2 section	V3 location	Treatment
Data, memory and Record Passports	Section 23	Expanded with domain entities, classes and temporal authority.
Dashboards, metrics and ROI	Sections 20-21	Expanded with complete formulas, metrics and funder exports.
Technical and non-functional architecture	Sections 22-24	Expanded into stack, services, APIs, events and integration controls.
Governance, risk and clarifications	Sections 25-29	Consolidated and extended without repetition.
Earlier appendices	Appendices A-H	Repository tests, Agent Cards, data dictionary, metrics, sources and glossary retained and expanded.

Appendix C. Repository Acceptance Test Matrix

Test	Scenario	Expected result
REP-01	Unauthorized user attempts upload.	Request denied and event recorded without exposing container contents.
REP-02	Authorized user uploads a transcript with required metadata.	Item is stored, scanned, indexed and linked to correct container.
REP-03	Recording lacks required consent.	AI extraction and broader sharing are blocked.
REP-04	User searches by project, participant and date.	Only authorized matching records appear.
REP-05	Transcript is corrected.	New version is current; original and correction lineage remain.
REP-06	AI drafts decisions and commitments.	Output is draft, source-linked and unavailable as official record until review.
REP-07	Facilitator approves selected decisions.	Approved records link to source and reviewer.
REP-08	Item reaches retention expiry.	Required review or deletion action occurs and is audited.
REP-09	Legal or governance hold applies.	Scheduled deletion pauses for authorized hold.
REP-10	Storage quota approaches threshold.	Authorized users receive warning and usage report.
REP-11	User export is requested.	Export includes authorized source, metadata and audit summary only.
REP-12	Source item is deleted.	Search and AI index are updated; related records show source unavailability.
REP-13	Duplicate connector event arrives.	One item is retained and duplicate event is logged.
REP-14	Restore is performed.	Database metadata, object and links are recovered consistently.

Appendix D. Agent and Artifact Cards

D.1 Minimum Agent Card

Field	Description
Agent ID / version	Stable identifier and release version.
Name and user-facing description	Plain-language explanation of what the agent does.
Accountable owner	Named WSS role responsible for behavior.
Purpose	Narrow task the agent is authorized to support.
Authority class	A0, A1, A2, A3 or separately approved A4.
Allowed inputs	Record types, data classes and consent states.

Field	Description
Prohibited inputs / inferences	Sensitive data or conclusions the agent may not use or derive.
Approved tools	Retrieval, calculation, file processing or internal action tools.
Source policy	Approved corpus, citation and freshness expectations.
Output types	Question, suggestion, draft, internal action or escalation.
Review requirement	User, facilitator, steward, evaluator or no review for retrieval.
Evaluation suite	Accuracy, source, safety, bias, refusal and regression tests.
Logging / retention	What is logged, for how long and who can inspect it.
Failure behavior	Safe refusal, retry, route or stop.
Revocation	Who can disable the agent and how quickly.

D.2 Core artifact cards

Artifact	Required fields	Release behavior
Purpose Compass	Owner, domains, responses, visibility, version and next milestone.	Private by default; shareable by field.
Opportunity Card	Owner, type, purpose, need / offer, context, visibility, expiry and evidence.	Searchable only within approved scope.
Match Brief	Parties, rationale, sources, dimensions, gaps, steward and consent.	No introduction until both parties consent.
Change Object	Context, intended change, stakeholders, outcomes, risks, governance, metrics and version.	Official only after authorized approval.
Learning Pathway	Goal, sources, steps, reviewer, accessibility, evidence and state.	Delivered only from approved content or clearly labeled draft.
Learning Harvest	Purpose, participants, themes, decisions, evidence, negative findings, repair and next gate.	Public or funder release requires approval.
Metric Passport	Definition, owner, method, frequency, source, limitations, threshold and evidence grade.	Interpretation remains contextual.
Record Passport	Purpose, source, authority, consent, sensitivity, visibility, review, retention and release.	Governs every consequential object.

Appendix E. Core Data Dictionary

Entity	Purpose	Key relationships
Person	Stable human subject record.	Accounts, profiles, memberships, consents, evidence.
Account	Authentication linkage and account state.	Person, tenant, sessions.
Organization	Institution, company, NGO, community or agency.	Memberships, roles, opportunities, projects.
RoleAssignment	Role held by person in context.	Person, organization, authority, expiry.
ConsentReceipt	User decision for a defined purpose.	Person, purpose, version, effective time.
ProfileVersion	Immutable snapshot of current profile state.	Person, claims, evidence, prior version.
ProfileClaim	Atomic assertion about capability, interest or context.	Source, state, reviewer, visibility.
PurposeCompass	User-controlled purpose and constraint record.	Person, North Star, pathway.
Circle	Persistent facilitated collaboration group.	Members, sessions, agreements, harvests.
RopeTeam	Small support team.	Members, check-ins, barriers, mentor.
RepositoryItem	Governed communication or file.	Container, metadata, source, versions, links.
NeedAssetOffer	Structured demand or capacity card.	Owner, opportunity, match.
MatchBrief	Explainable proposed connection.	Parties, dimensions, sources, consent.
ActionRoom	Bounded project workspace.	Members, tasks, Change Objects, evidence.

Entity	Purpose	Key relationships
ChangeObject	Structured intended change and governance.	Action Room, risks, metrics, versions.
LearningAtom	Small approved learning object.	Source, pathway, reviewer.
LearningPathway	Sequenced user learning plan.	Person, atoms, completion, evidence.
EvidenceArtifact	File, link, observation or record supporting a claim.	Owner, project, profile, review.
MetricPassport	Definition and governance of a metric.	Observations, evidence, dashboard.
AgentCard	Governance contract for an AI agent.	Agent registry, models, tools, evaluation.
AIJob	One agent or model execution.	Request, sources, output, review.
PaymentPlan	Commercial access configuration.	Product, eligibility, entitlement.
Entitlement	Effective access state.	Person / organization, plan, sponsor, expiry.
LearningHarvest	Reviewed account of learning and next decision.	Circle / project, evidence, release.

Appendix F. Revenue and ROI Metric Dictionary

Metric	Definition	Source	Review frequency
Active paid plans	Current verified paid entitlements.	Payment and entitlement service.	Monthly or programme cycle.
Active sponsored users	Users with current sponsored entitlements.	Seat allocations and entitlements.	Monthly.
Sponsored-seat utilization	Activated sponsored seats divided by allocated capacity.	Sponsored pools and accounts.	Monthly.
Recurring revenue	Recognized recurring subscription value for the period.	Provider events and reconciliation.	Monthly.
One-time programme revenue	Recognized one-time access and programme value.	Transactions and products.	Programme cycle.
Refund / dispute rate	Refunded or disputed transactions divided by completed transactions.	Provider events.	Monthly.
Paid activation	Paying accounts reaching first meaningful action.	Payment, entitlement and activity events.	Monthly.
Revenue mix	Distribution among subscriptions, programmes, institutions, sponsorships, services and external support.	Finance exports.	Quarterly or decision gate.
Contribution margin	Recognized revenue less directly attributable delivery expenditure, divided by revenue.	Finance and delivery records.	Offer review.
Acquisition ratio	Outreach expenditure divided by newly activated payer.	CRM and finance records.	Campaign review.
Continuation rate	Paying or sponsoring partners choosing the next approved period or stage.	Contract and entitlement records.	Programme completion.
Resource leverage	External cash and approved in-kind resources mobilized relative to WSS resources applied.	Funding and contribution records.	Decision gate.
Access leverage	Supported participants per sponsor resource unit.	Sponsored seats and finance.	Sponsor report.
Outcome evidence coverage	Outcome claims with adequate evidence.	Evidence and metric service.	Dashboard cycle.
Partner ROI	Partner-specific attributable benefit less resources invested, divided by resources invested.	Agreed partner data and method.	End of pilot or programme.

Appendix G. Source Basis and Factual Boundaries

G.1 Controlling internal sources

This V3 proposal consolidates:

- PHOENIX Collaboration Platform POC Proposal v1.0;
- PHOENIX Coherent Community Intelligence and Coherence Concierge Proposal v2.0;
- Shaligram's PHOENIX LMS Constellation Robust POC proposal;
- WSS strategic partnership, equal-partner and co-evolutionary architecture documents;
- PHOENIX trust and human-agency materials;
- Seva Hub programme materials;
- Women's Empowerment programme and platform materials;
- Conscious Collaboration series and PHOENIX architecture maps;
- university AI resilience and Island of Coherence pilot materials; and
- meeting and collaborator inputs used only as needs and decision context unless separately approved.

G.2 Factual boundary rules

- A proposed role is not an accepted partner role.
- A diagram is not proof of implemented functionality.
- A prototype capability is not a production service.
- A metric definition is not a measured outcome.
- A candidate organization suggestion is not an endorsement.
- A regenerative lens is not certification.
- A payment product is not financial, tax or legal advice.
- An AI draft is not an approved human decision.
- An internal source is not automatically cleared for public use.
- A project outcome is not attributable to PHOENIX without an agreed method and evidence.

Appendix H. Working Glossary

Term	Working definition
Action Room	Lightweight bounded workspace for a Coherence Cell or project.
Agent Card	Governance and technical contract defining an AI agent's purpose, authority, tools, data, review and stop conditions.
Change Object	Structured, versioned representation of an intended change and its context, risks, governance, evidence and outcomes.
Coherence Cell	Small action team that converts aligned intention into visible implementation and learning.
Coherence Circle	Persistent facilitated group for trust, dialogue, agreements, commitments and learning.
Coherence Concierge	User-facing AI guide coordinating bounded agents under WSS trust, values, source, review and memory controls.
Coherent Community Intelligence	Governed capacity to sense, interpret, deliberate, align, act, evidence, learn, repair and evolve.
Doughnut lens	Use of social-foundation and ecological-ceiling questions in contextual decision support.
Entitlement	Explainable access state produced by payment, sponsorship, contract or approved free-access rule.
Evidence grade	Explicit statement of how strongly an observation or claim is supported.
Evidence Locker	User- or project-controlled collection of artifacts and reviews supporting learning and contribution.
Ikigai-inspired Purpose Compass	Reflective planning tool connecting meaning, capability, contribution and viable livelihood without psychometric claims.
Island of Coherence	Place- or network-based environment where trust, coordination, visible action, evidence and learning are demonstrated.
Learning Harvest	Reviewed synthesis of purpose, participation, decisions, outcomes, evidence, tensions, repair and next steps.
Living Metric	Contextual, governed signal linked to a definition, source, evidence state and decision use.
Match Brief	Source-linked, explainable proposal for a possible collaboration, subject to steward review and mutual consent.

Term	Working definition
North Star	User- or organization-approved direction, milestone and next action connected to context and evidence.
Record Passport	Metadata and control layer defining purpose, provenance, authority, consent, sensitivity, visibility, review, retention and release.
Rope Team	Small mutual-support structure for belonging, pacing, barriers, mentorship and continuity.
Warm data	Context-rich, relationship-aware information whose meaning depends on place, history, purpose and human interpretation.

Closing Decision Statement

PHOENIX V3 is intended to give Shaligram a complete, pragmatic and testable basis for a revised Statement of Work. It combines the execution discipline of Proposal v1.0 with the expanded community-intelligence, purpose, regeneration, inclusion, repository and agent architecture of Proposal v2.0.

The core delivery rule is simple:

> **Build the smallest complete system that lets people enter safely, clarify purpose, learn, form trusted relationships, act, preserve evidence, learn and repair - while keeping AI, payment, data and institutional power visibly under human governance.**

The next action is a structured scope-reconciliation workshop using Appendix B and Section 28, followed by an updated backlog, acceptance plan and Statement of Work.
